Conference Agenda Pre-congress workshop	12
Conference Agenda	15
Conference Agenda - Agenda Congreso (English/Español)	17
Plenary lecture index	23
Legal developments in the world of ozone therapy and its challenges.....	25
Venezuela, a special case for the development of ozone therapy.....	27
Scientific basis for pain management with ozone.....	29
Report from a Consulting room of pain treatment with non-conventional therapies.....	31
Extracorporeal blood oxigenation and ozonization.....	33
Rheumatoid arthritis as chronic inflammatory process and the rationale of ozone treatment.....	34
Treatment of lumbar disc herniation with ozone-oxygen guided by tomography.....	35
Ozone therapy in penumbra area of ischemic cerebrovascular attacks.....	37
Combination Therapy of Concentrate of Growth Factors (CGF) and Ozone: Its application in diabetic ulcers and in aesthetic medicine.....	38
Arthrodiastasis and canalicular decompression, another effect of medical ozone.....	39
Caudal and Epidural Ozone Injections in Low Back Pain Cases.....	40
Ozone Sauna.Can we use it in medicine?.....	41
Adaptogenic theory of ozone therapy. Why as a result of exchange rate system procedures, ozone therapy normalize the biochemical and physiological characteristics of an organism?.....	42
Why ozone therapy in multiple sclerosis?.....	44
Cardioprotective effects of ozone oxidative preconditioning in an in vivo model of ischemia/reperfusion injury.....	45
Success story of ozonucleolysis in disc lesions in Pakistan.....	46
A substitute of the Fluor. The protective ozone in the oral cavity.....	47
Clinical Applications of Ozone in the Dental Clinic, a USA perspective.....	49
Plant-derived products in the treatment of HIV; a novel approach to treating this disease.....	50
Advances in dentistry and ozone therapy, effect of gaseous ozone in Enterococcus faecalis biofilms, in vitro study.....	51
The therapeutic value of ozonotherapy.....	53
Molecular basis of the effects of ozone. New advances.....	54
The regulation of oxidative stress in the ozone therapy. Comparison with other therapies and frequent situations.....	55
Treatment of lumbar disc herniation with ozone-oxygen guided by tomography.....	57
Bioenergetics optimization as a key mechanism of ozone therapy effects at urgent pathology.....	59
Oxygen ozone therapy as integrated treatment of chronic obstructive pulmonary disease: a preliminary study.....	60
Does ozone have effect in rectal insufflation application in the estrone metabolism in postmenopausal women and in women with mammary neoplasia - both pre and post menopausal - positive hormone receptors?.....	61
Ozone therapy using in dermatological practice. Russian experience.....	62
The importance of ozone therapy in clinical veterinary practice. Case reports.....	63
Ozonotherapy in hydatid cysts of spinal cord.....	65
Application features of ozonotherapy in the practice of the otolaryngologist.....	67

IV International Congress of AEPROMO
"For a Professional Practice of Ozone Therapy"
Spanish Association of Medical Professionals in Ozone Therapy

Poster	69
Ozone therapy in chronic heart failure.....	70
Alcoholic liver cirrhosis treated with AHTM	72
Ozonotherapy for the treatment of endometritis.....	74
Ozonoterapia en Pacientes con Fibrosis Pulmonar.....	75
Effects of ozone and singlet oxygen inhalations to oxidative metabolism in rats	76
UVB - Ultraviolet Blood Irradiation: An analysis of three major changes.....	77
Oxidative Stress Blood Level Analysis in Ozone Therapy.....	78
Study of the effective ozone dosages in the treatment of generalized arthrosis	79
Speakers CV	81
Authors Index	118

Preface

¡We have transformed what used to be perceived as a problem into a challenge!

The 4th International Congress of AEPROMO and 3rd of IMEOF "For a Professional Practice of Ozone Therapy" is a major new step forward out of the many that our organization has been doing in favor of ozone therapy. After creating AEPROMO in 2008, we organized the first international congress in 2009. This event had a significant impact because we do it after getting from the Madrid Regional Ministry of Health the withdrawal of the ban of the practice of ozone therapy in outpatient clinics. In addition the Regional Ministry authorized its practice and spelled out the requirements to be practiced. The Congress of Pontevedra in 2009 has been an important milestone for three reasons: The ozone therapy in Spain began to be regularized by health authorities; for the first time a congress of ozone therapy received the title of "Health Interest"; and finally because we managed to assemble in Pontevedra leading figures from the ozone therapy world to share their experiences and pass on knowledge.

A qualitative improvement of enormous significance took place at the 2nd. International Congress of AEPROMO in 2010: The "International Meeting of Schools of Ozone Therapy" held in Madrid, at the Royal Academy of Medicine. Qualitative improvement because it was the first time that ozone therapy reached the ancient walls of the Royal Academy of Medicine; for the first time in the history of the global ozone therapy different schools, at the AEPROMO initiative, agreed on a dense framework document for the use of the medical ozone. The Document named was "The Madrid Declaration on Ozone Therapy." Today is the reference document for the vast majority of ozonotherapists in the world, having the support of 33 national and international associations of ozone therapy and it has been translated into eleven languages.

This congress laid the groundwork for the creation in October 2010 of the International Scientific Committee of the Ozone Therapy (ISCO3). This committee has, among its work descriptions, to update, when necessary, the Madrid Declaration on Ozone Therapy. So the Declaration is a living document and of permanent reference.

The IV International Congress will continue walking the same path set by the two previous ones. We will keep the organizational criterion to carry out these events in academic centers or in universities, to obtain more presence and strength in places where before, and even today, are reluctant to ozone therapy. ¡We have transformed what used to be perceived as a problem into a challenge! In that way we hold the 3rd. International Congress at the Faculty of Medicine of the Madrid Complutense University, one of the most important high study centers of the Spanish-speaking countries and the IV International Congress in Rey Juan Carlos University in Madrid. At present the King Juan Carlos University and AEROMO are jointly organizing and implementing the 2013 – 2014 distance learning course "University Diploma in Ozone Therapy and Ozonated Growth Factors".

As in the three previous occasions, the Congress has been awarded by the health authorities with the title of "Health Interest." The congress is held having the scientific back up of the recently book issued by AEPROMO: "Guide for the medical use of ozone - Therapeutic fundamentals and indications" written by a research team led by Dr. Adriana Schwartz, President of AEPROMO. It is the most complete publication on ozone therapy written in Spanish.

IV International Congress of AEPROMO
"For a Professional Practice of Ozone Therapy"
Spanish Association of Medical Professionals in Ozone Therapy

We are approaching the congress with the enormous satisfaction of having achieved that 15 out of 17 Spanish states, have accepted the request of AEPROMO, to regularize the ozone therapy within their respective jurisdictions. We arrive to the congress with the joy of accomplishment to have effectively contributed to the foundation in 2008 and strengthening of the International Medical Ozone Federation (IMEOF), integrated by 21 national associations from around the world.

This congress will be preceded by three pre-congress courses: 1) Course for physicians: "New techniques for the application of medical ozone" 2) Course for dentists: "Ozone applications in dentistry" 3) Course for veterinarians: "Ozone therapy in the veterinary clinic".

The objectives of the 4th International Congress of AEPROMO & 3rd of IMEOF are:

1. To maintain a high level of updating, exchange and collaboration among all professionals, laboratories and medical and academic institutions, which work research and development topics and clinical applications related to ozone therapy.
2. To harmonize existing therapeutic procedures on the basis of efficacy / risk balance.
3. To insist on the introduction of good clinical practices; to disseminate knowledge, development of basic research and implementation of clinical trials on the topic of ozone therapy.
4. To divulge the main results in the field of pharmacological, preclinical and clinical toxicological research, technological, legal and good clinical practices in the application of ozone therapy.

In this Special Supplement of the Spanish Journal of Ozone Therapy the reader will find abstracts of all presentations and posters of the congress, the CV of all the speakers, members of the Scientific and Organizing Committees, and the names and addresses of the sponsors of international congress.

The congress is already underway. It is up to the speakers to explain their researches and share their clinical experiences. It is up to the participants to absorb the knowledge and to ask every subject, which has not been enough clarified and the current doubts. Let everyone make the most of the time to exchange experiences, to establish new contacts, to expand professional horizons and dive deep into one of the most beneficial therapies for patients discovered so far.

As organizers we hand over the baton and from now on the protagonists of the congress will be the speakers and participants!

Madrid, May 22, 2014.

Welcome all!
Organizing Committee.

Prefacio

¡Transformamos los obstáculos en retos!

El 4to. Congreso Internacional de AEPROMO y 3ro de la IMEO "Por la práctica profesional de la ozonoterapia" constituye un nuevo gran paso hacia delante, de los muchos que nuestra asociación ha venido dando a favor de la terapia del ozono.

Después de la creación de AEPROMO en el 2008, nos lanzamos al primer congreso internacional en el 2009. Éste tuvo un impacto significativo porque lo realizamos tras lograr que la Comunidad de Madrid levantara la prohibición que pesaba contra la práctica de la ozonoterapia en centros ambulatorios. Además autorizó su práctica y detalló por escrito los requisitos para que se pudiera realizar. El congreso de Pontevedra del 2009 marcó un hito importante por tres razones: La ozonoterapia en España comenzó a ser regulada por las autoridades sanitarias; por primera vez un congreso de ozonoterapia recibía el título de "Interés Sanitario"; y finalmente porque logramos convocar importantes personalidades del mundo de la ozonoterapia en Pontevedra para que compartieran experiencias y transmitieran conocimientos.

Un avance cualitativo de enorme significado tuvo lugar en el 2do. Congreso Internacional de AEPROMO en 2010: "Encuentro Internacional de Escuelas de Ozonoterapia", realizado en Madrid, en la Real Academia Nacional de Medicina. Avance cualitativo porque la ozonoterapia por primera vez llegaba a los centenarios muros de la Real Academia; por primera vez en la historia de la ozonoterapia mundial las diferentes escuelas, a iniciativa de AEPROMO, se pusieron de acuerdo en un denso documento marco para la utilización del Ozono médico. Documento bautizado "Declaración de Madrid sobre la Ozonoterapia". Hoy en día es el documento de referencia para la inmensa mayoría de ozonoterapeutas en el mundo, teniendo el respaldo de 33 asociaciones nacionales e internacionales de ozonoterapia y estando traducido a diez idiomas diferentes.

En este congreso se sentaron las bases para la creación en octubre de 2010 del *International Scientific Committee of Ozone Therapy* (ISCO3) que justamente tiene dentro de sus funciones el actualizar, cuando sea necesario, la Declaración de Madrid sobre la Ozonoterapia. De esta forma la Declaración es un instrumento vivo y de referencia permanente.

El IV Congreso continuará transitando el mismo camino marcado por los congresos anteriores. Perseveramos en el criterio organizativo de realizar estos eventos en centros académicos o en universidades, para así lograr tener más presencia y fortaleza en los lugares donde con anterioridad, y aún hoy en día, se tienen reticencias a la ozonoterapia. ¡Hemos transformado lo percibido como un problema en un desafío! Por ello nuestra decisión de celebrar el 3er congreso en la Facultad de Medicina de la Universidad Complutense de Madrid, uno de los más importantes centros de alto estudio de los países de habla castellana y este cuarto congreso en la Universidad Rey Juan Carlos, Campus de Alcorcón, Madrid (España). En la actualidad la Universidad Rey Juan Carlos y AEROMO organizan en forma conjunta el curso a distancia (2013 – 2014) con una semana presencial "Experto Universitario en Ozonoterapia y Factores de Crecimiento Ozonizados"

Como en las ocasiones anteriores el congreso vuelve a ser galardonado por las autoridades sanitarias con el título de "Interés Sanitario".

IV International Congress of AEPROMO
"For a Professional Practice of Ozone Therapy"
Spanish Association of Medical Professionals in Ozone Therapy

El congreso se realiza teniendo el respaldo científico del libro recientemente publicado por AEPROMO: "Guía para el uso médico del ozono - Fundamentos terapéuticos e indicaciones", escrito por un equipo investigativo liderado por la Dra. Adriana Schwartz, Presidenta de AEPROMO. Es la obra más completa en ozonoterapia escrita en español.

Nos encaminamos hacia el congreso con la enorme satisfacción de haber logrado que 15 de las 17 comunidades españolas, hayan aceptado, a petición de AEPROMO, regularizar la práctica de la ozonoterapia dentro de sus respectivas jurisdicciones.

Llegamos al congreso con la alegría del deber cumplido al haber contribuido eficazmente al renacimiento y fortalecimiento de la *International Medical Ozone Federation* (IMEOF) integrada ya por 21 asociaciones nacionales de diferentes partes del mundo.

El congreso oferta a los participantes tres cursos precongreso: 1) Curso para médicos: "Nuevas técnicas de aplicación del ozono en medicina interna" 2) Curso para odontólogos: "Curso ozonoterapia oral y perioral" y 3) Curso para veterinarios: "Curso de ozonoterapia en animales menores. Casos clínicos"

Los objetivos del IV Congreso Internacional de AEPROMO y III de IMEOF. "*Por una práctica profesional de la ozonoterapia*" son:

1. Mantener un elevado nivel de actualización, intercambio y colaboración entre todos los profesionales, laboratorios e instituciones médicas y académicas, que trabajan temáticas de investigación-desarrollo y aplicaciones clínicas relacionadas con la ozonoterapia.
2. Armonizar los procedimientos terapéuticos actuales sobre la base del equilibrio eficacia / riesgo.
3. Insistir en la introducción de las buenas prácticas clínicas; divulgación del conocimiento, desarrollo de investigaciones básicas y ejecución de ensayos clínicos sobre la temática ozonoterapia.
4. Divulgar los principales resultados en el campo de la investigación farmacológica y toxicológica preclínica y clínica, tecnológica, legal y sobre buenas prácticas clínicas en la aplicación de la ozonoterapia.

En este Suplemento Especial de la Revista Española de Ozonoterapia el lector encontrará los sumarios de todas las ponencias y posters del congreso, el CV de todos los ponentes, los integrantes de los Comités Científico y Organizador, así como los nombres y direcciones de los patrocinadores del evento.

El congreso ya está en marcha. Corresponde ahora a los ponentes explicar sus investigaciones y compartir sus experiencias clínicas. A los participantes les toca asimilar lo transmitido y preguntar lo no suficientemente aclarado y las dudas existentes. Que todos aprovechen al máximo el tiempo para intercambiar experiencias, para establecer nuevos contactos, para ampliar horizontes profesionales y para sumergirse en profundidad en una de las terapias más beneficiosas para los pacientes descubiertas hasta ahora.

¡Los organizadores cedemos el testigo y ahora los protagonistas del congreso serán los ponentes y los participantes!

Madrid, 22 de mayo de 2014.
Sean todos bienvenidos!
El comité organizador.

Conference Agenda Pre-congress workshop

Jueves, 5	Curso para médicos: "Nuevas técnicas de aplicación del ozono en medicina interna"
	Aulario I, Universidad Rey Juan Carlos, Campus de Alcorcón, Madrid (España). Idioma: Castellano
08:00-8:30	Registro / Registration
	Nuevas técnicas de aplicación del ozono en medicina interna
08:30-8:35	Presentación del curso y profesores / Presentation of the course and professors.
08:35-10:30	Dr. Gregorio Martínez Sánchez (Italia - Italy) Vinculo entre el estrés oxidativo, la relación dosis efecto y los mecanismos de acción de la ozonoterapia. / Link among oxidative stress, dose effect relation and mechanisms of action of ozone therapy. Dr. Ciencias Farmacéuticas. Investigador Titular y Director Científico, Medical Center Beauty Benefit srl. Ancona. Miembro de AEPROMO. Miembro del Comité Internacional Científico de Ozonoterapia (ISCO3). Miembro Consejo Redacción, Comités Editorial y Evaluador. Revista Española de Ozonoterapia. / <i>Pharmacy Doctor. Senior Researcher. Scientific Director, Medical Center Beauty Benefit srl. Ancona (Italy). AEPROMO member. Member, International Scientific Committee of Ozone Therapy (ISCO3). Member Drafting Board, Editorial & Evaluation Boards, Spanish Journal of Ozone Therapy.</i>
10:30 - 11:00	Pausa Café / Coffee break
11:00 - 12:00	Dr. Esteban González. (SPA). Reflexiones sobre seguridad y estandarización de la autohemoterapia mayor. / Thoughts on safety and standardization of major autohemotherapy. MD. Medicina Interna. Director de Clínicaria Internacional, Las Palmas. Miembro de AEPROMO. Miembro Consejo Redacción y Comité Evaluador, Revista Española de Ozonoterapia. <i>MD. Internal Medicine. Director, Clínicaria Internacional, Las Palmas. Member of AEPROMO. Member Drafting & Evaluation Boards, Spanish Journal of Ozone Therapy.</i>
12:00 - 13:30	Bs.C. Tom Lowe (USA). Irradiación ultravioleta de la sangre. Indicaciones, protocolos y materiales. Demostración en directo. / Ultraviolet blood irradiation. Directions, protocols and materials. Live demo. Director of Physicians UBI Awareness.
13:30 - 14:30	Dr. Gregorio Martínez Sánchez (Italia - Italy) . Ozonoterapia en el manejo paliativo del Cáncer. / Ozone therapy in the palliative treatment of cancer.
14:30 - 15:30	Pausa Almuerzo/ Lunch. A cargo de cada participante. Pueden comer a precio módico en el restaurante de estudiantes del Campus de Alcorcón, Universidad Rey Juan Carlos. Lunch in charge of every participant who may have it at a low price at the Students Restaurant of the Campus of Alcorcón King Juan Carlos University.
15:30 - 16:30	Dr. Michael Schreiber. (GER). Ozono como parte del concepto biológico del cáncer en la práctica diaria/ Ozone as part of a biological cancer concept in the daily practice. Council member of the Germany Ozone Society, and the Association of Doctors for Natural Medicine (ZAEN).
16:30 - 17:30	Dr. Eugeny Nazarov. (Ucrania). Ozonización extracorporea / Extracorporeal ozonation. Ph.D. Chem. Sci., Dr. Sci. Tech. President of the Ukrainian Association Ozone Therapists. Ukraine
17:30 - 18:00	Pausa Café / Coffee break
18:00 - 19:30	Dr. Eugeny Nazarov. (Ucrania). Taller solución salina ozonizada. Demostración en directo. / Workshop ozonated saline solution. Live demo. Ph.D. Chem. Sci., Dr. Sci. Tech. President of the Ukrainian Association Ozone Therapists. Ukraine
19.30	Fin del curso. Foto de grupo y entrega de certificados / End of course. Group photo and delivery of certificates.

Note:

If nothing else is specified, all events take place at Aulario I, Universidad Rey Juan Carlos, Campus de Alcorcón, Madrid (España).
Language: Pre-congress course is available only in Spanish.

Conference Agenda Pre-congress workshop

Jueves, 5	Curso para odontólogos: "Curso ozonoterapia oral y perioral"
	Salón de Actos, Departamental II, Universidad Rey Juan Carlos, Campus de Alcorcón, Madrid (España). Idioma: Castellano
08:00-8:30	Registro / Registration
Curso ozonoterapia oral y perioral	
08:30-8:35	Presentación del curso y profesores / Presentation of the course and professors.
08:35-11:00	Dra. Nora Bazzano, Argentina, Dr Mark Weiser, EUA. Aplicaciones del ozono en Odontología / Applications of ozone in dentistry. Demostración por video transmisión directa. / Video demonstration by direct broadcasting transmission.
11:00 - 11:30	Pausa Café / Coffee break
11:30 - 14:30	Dr. Ezio Gheno MD, DDS, Italia /Italy. Huesos y manejo de tejidos blandos en cirugía oral utilizando piezoeléctrica tecnología y factores de crecimiento / Bone & Soft Tissue Management in Oral Surgery using Piezo-electric Technology & Growth Factors. Demostración por video transmisión directa. / Video demonstration by direct broadcasting transmission.
14:30 - 15:30	Pausa Almuerzo/ Lunch. A cargo de cada participante. Pueden comer a precio módico en el restaurante de estudiantes del Campus de Alcorcón, Universidad Rey Juan Carlos. Lunch in charge of every participant who may have it at a low price at the Students Restaurant of the Campus of Alcorcón King Juan Carlos University.
15:30 - 16:30	Dr. Javier Hidalgo, España/Spain. Ozonoterapia en los trastornos temporomandibulares / Ozone-therapy in the temporomandibular disorders. Demostración por video transmisión directa. / Video demonstration by direct broadcasting transmission. MD. Odontólogo. Doctor en Neurociencias. Miembro del Grupo de Investigación en Cefaleas, Fibromialgia y Psicotropos de la Junta de Andalucía. Director médico de Cefalalgia. Miembro de AEPROMO. MD. Dentist. Doctor in Neuroscience. Member of the Research Group on Headaches, Fibromyalgia and Psychotropics of the Andalusian Community. Medical Director of Cefalalgia. AEPROMO member.
16:30 - 17:30	Dr. Javier Hidalgo, España/Spain. Ozonoterapia en el dolor craneo-cervico-facial/Ozone-therapy in the skull-cervico-facial pain. Demostración por video transmisión directa. / Video demonstration by direct broadcasting transmission.
17:30 - 18:00	Pausa Café / Coffee break
18:00 - 19:30	Ing. Manuel Delgado Spain. Uso de Generadores médicos en Odontología/Use of ozone generators in dentistry.
19:30	Fin del curso. Foto de grupo y entrega de certificados / End of course. Group photo and delivery of certificates.

Note:

If nothing else is specified, all events take place at Salón de Actos, Departamental II, Universidad Rey Juan Carlos, Campus de Alcorcón, Madrid (España).
Language: Pre-congress course is available only in Spanish.

Conference Agenda Pre-congress workshop

Jueves, 5	Curso para veterinarios: "Ozonoterapia en la clínica veterinaria"
	Alulario I, Universidad Rey Juan Carlos, Campus de Alcorcón, Madrid (España). Idioma: Castellano
09:00-9:30	Registro / Registration
	Ozonoterapia en la clínica veterinaria
09:30-9:35	Presentación del curso y profesores / Presentation of the course and professors.
09:35-10:35	Dra. Vet. Mercedes Hernández Avilés. Fundamentos biológicos del potencial terapéutico del ozono. Estrés Oxidativo. / Biological foundations of the therapeutic potential of ozone. Oxidative Stress.
10:35-11:35	Bs.C. Jonathan Lowe (USA). Irradiación de la sangre con ultravioleta y ozono. Terapia innovadora y eficaz en veterinaria. Indicaciones y demostración de la técnica. / Blood irradiation with ultraviolet and ozone. Innovative and effective veterinary therapy. Directions and demonstration of the technique.
11:35- 12:05	Pausa Café / Coffee break
12:05 - 13:05	Dra. Vet. Mercedes Hernández Avilés. Ventajas de la ozonoterapia/ advantages of ozone therapy. Probada eficacia en la mayoría de enfermedades. / Proven effective in most diseases. Adaptable a todas las especies / Adaptable to all species. Compatible con los tratamientos convencionales. / Compatible with conventional treatments. Factores de crecimiento ozonizados. / Ozonated growth factors.
13:05 - 14:05	Ing. Manuel Delgado (SPA). Generadores de ozono médico. Seguridad en el manejo del ozono. Materiales no aptos. Fungibles / Medical Ozone Generators. Ozone Safety handling. Compatible materials. Consumables to be used. Cálculo de dosis. / Dose calculation. Dra. Vet. Mercedes Hernández Avilés (SPA). Vías / Routes: Autohemoterapia mayor (AHM). / Major Autohemotherapy (MAHT). Autohemoterapia menor (AHm). / Minor Autohemotherapy (MiAHT). Insuflación rectal (IR). Bolsa. Inyección local. Aceite. Agua. Suero. / Rectal insufflation (RI). Bagging. Local injection. Oil. Water. Normal Saline.
14:05 - 15:30	Pausa Almuerzo/ Lunch. A cargo de cada participante. Pueden comer a precio módico en el restaurante de estudiantes del Campus de Alcorcón, Universidad Rey Juan Carlos. IV International Congress of AEPROMO
"For a Professional Practice of Ozone Therapy"
Spanish Association of Medical Professionals in Ozone Therapy

Conference Agenda

Friday 6th - Saturday 7th, May 2014.

Friday, 6	Universidad Rey Juan Carlos, Campus de Alcorcón, Madrid (España).
08:00 - 9:00	Registration. Universidad Rey Juan Carlos, Campus de Alcorcón, Madrid (España)
09:00 - 9:30	Welcome / Open ceremony Welcoming speech: Dra. Adriana Schwartz Tapia. President of IMEOF.
9:00 - 9:15	Dra. María Angustias Palomar Gallejo
	Dr. Juan López-Laserna
9:15 - 9:30	Welcoming speech: Dr. Fernando Suárez Bilbao. Dean Univ. Rey Juan Carlos.
	Plenary Lecture. Chairs: Adriana Schwartz Tapia (SPA)
9:30 - 11:05	9.30 Roberto Quintero Mariño (SPA). Legal developments in the world of ozone therapy and its challenges 9.50 Franklin E Aular Montilla (VEN). Venezuela, a special case for the development of ozone therapy 10.10 Froylán Alvarado Güémez (MEX). Scientific basis for management of pain with ozone 10.30 Antonio Corralero Romaguera (SPA). Report from a Consulting room of pain treatment with non-conventional therapies 10.50-11.05 Discussion
11:05 - 12:00	Coffee Break and visit to commercial exposition Plenary Lecture. Chairs: Juan López Lazerna Ruiz (SPA) / Froylán Alvarado Güémez (MEX).
12:00 - 13:55	12.00 Renate Viebahn-Haensler (GER). Rheumatoid arthritis as chronic inflammatory process and the rationale of ozone treatment 12.20 Eugeni I. Nazarov (UKR). Extracorporeal blood oxygenation and ozonization 12.40 Iván Pacheco (VEN). Treatment of failed back syndrome with percutaneous discolisis and Epidural Block with oxygen-ozone 13.00 Raúl Matera (ARG). Ozone therapy in penumbra area of ischemic cerebrovascular attacks 13.20 Adriana Schwartz Tapia (SPA). Combination Therapy of Concentrate of Growth Factors (CGF) and Ozone: Its application in diabetic ulcers and in aesthetic medicine. 13.40-13:55 Discussion
13:55 - 15:45	Lunch in charge of every participant who may have it at a low price at the Students Restaurant of the Campus of Alcorcón King Juan Carlos University. Speakers are invited by AEPROMO. Plenary Lecture. Chairs: Esteban González Sánchez (SPA) / Raúl Matera (ARG).
15:45 - 17:40	15.45 Juan López Lazerna Ruiz (SPA) Arthrodiastasis and canalicular decompression, another effect of medical ozone 16.05 Ruhi Cakir (TUR). Caudal and Epidural Ozone Injections in Low Back Pain Cases 16.25 Saltuk Aytacoglu (TUR). Ozone Sauna.Can we use it in medicine? 16.45 Eugeni I. Nazarov (UKR). Adaptogenic theory of ozone therapy. Why as a result of exchange rate system procedures, ozone therapy normalize the biochemical and physiological characteristics of an organism? 17.15 Vincenzo Simonetti (ITA). Why ozone therapy in multiple sclerosis? 17.35-17.50 Discussion
17:50 - 18:30	Coffee Break and visit to commercial exposition
18:30 - 20:30	AEPROMO Members Meeting 18.30 First call, AEPROMO ordinary general assembly. Aula Magna Aulario I, Campus de Alcorcón, King Juan Carlos University 19.30 Second call, AEPROMO ordinary general assembly. Aula Magna Aulario I, Campus de Alcorcón, King Juan Carlos University.
20.30	End first day congress activities

IV International Congress of AEPROMO
"For a Professional Practice of Ozone Therapy"
Spanish Association of Medical Professionals in Ozone Therapy

Conference Agenda

Saturday 7th, May 2014.

Saturday, 7	Universidad Rey Juan Carlos, Campus de Alcorcón, Madrid (España).
	Plenary Lecture. Chairs: Nora Bazzano (ARG)
9:00 - 11:15	9.00 Nabil Mawsouf (EGY). Cardioprotective effects of ozone oxidative preconditioning in an in vivo model of ischemia/reperfusion injury 9.20 Umair Rashid Chaudhry (PAK). Success story of ozonucleolysis in disc lesions in Pakistan 9.40 10.00 Nora Bazzano (ARG). A substitute of the Fluor. The protective ozone in the oral cavity 10.20 Mark T Weiser (USA). Clinical Applications of Ozone in the Dental Clinic, a USA perspective 10.40 Julian Holmes (GBR – ZAF). Plant-derived products in the treatment of HIV; a novel approach to treating this disease 11.00-11.15 Discussion
11:15 - 12:15	Coffee Break and visit to commercial exposition
	Plenary Lecture. Chairs: Humberto Loscertales (SPA)
12:15 - 13:50	12.15 Viviana Clelia Lüdi Etchevarren (SPA). Advances in dentistry and ozone therapy, effect of gaseous ozone in Enterococcus faecalis biofilms, in vitro study 12.35 Velio Bocci (ITA). The therapeutic value of ozonotherapy 12.55 Gregorio Martínez Sánchez (ITA). Molecular basis of the effects of ozone. New advances 13.15 Manuel Gómez Moraleda (SPA). The regulation of oxidative stress in the ozone therapy. Comparison with other therapies and frequent situations 13.35 –13.50 Discussion
13.50 - 15.50	Lunch in charge of every participant who may have it at a low price at the Students Restaurant of the Campus of Alcorcón King Juan Carlos University. Speakers are invited by AEPROMO.
	Plenary Lecture. Chairs: Gregorio Martínez Sánchez (ITA)/ Nabil Mawsouf (EGY)
15:50 - 17:25	15.50 Iván Pacheco (VEN). Treatment of lumbar disc herniation with ozone-oxygen guided by tomography 16.10 Sergey Peretyagin (RUS). Bioenergetics optimization as a key mechanism of ozone therapy effects at urgent pathology 16.30 Emma Borelli (ITA). Oxygen ozone therapy as integrated treatment of chronic obstructive pulmonary disease: a preliminary study 16.50 Santos Martín (SPA). Does ozone have effect in rectal insufflation application in the estrone metabolism in postmenopausal women and in women with mammary neoplasia - both pre and post menopausal - positive hormone receptors? 17.10 – 17.25 Discussion
17:25 - 18:25	Coffee Break and visit to commercial exposition
	Plenary Lecture. Chairs: Antonio Corralero (SPA) / Franklin Aular (VEN).
18:25 - 20:00	18.25 Oksana Bitkina (RUS). Ozone therapy in dermatological practice 18.45 Mercedes Hernández Avilés (SPA). Importance of Ozone therapy in veterinary. Clinical cases 19.05 Víctor Pereyra (ARG). Ozonotherapy in hydatid cysts of spinal cord 19.25 Tetiana Barkhotkina (RUS). Application features of ozonotherapy in the practice of the otolaryngologist 19.45- 20.00 Discussion / General discussion / Concluding remarks

IV International Congress of AEPROMO
"For a Professional Practice of Ozone Therapy"
Spanish Association of Medical Professionals in Ozone Therapy

Conference Agenda - Agenda Congreso (English/Español)

Bilingual version/ Version bilingue

Viernes 6 de junio - Friday June 6th, 2014

8:00 – 9:00 Registro - *Registration*

9:00 – 9:30 **Inauguración - Welcome Ceremony**

Moderadores - Chairpersons: Dra. Adriana Schwartz Tapia (España). Dr. Juan López Laserna-Ruiz (España)

9:30 – 9:50 **D. Roberto Quintero Mariño (España - Spain)**

Abogado. Diplomado en Relaciones Internacionales y Doctor en Ciencias Políticas. Funcionario de Naciones Unidas por más de 22 años. Asesor Jurídico de la Asociación Española de Profesionales Médicos en Ozonoterapia - AEPROMO. (www.aepromo.org); de la International Medical Ozone Federation (IMEOF) (www.imeof.org); y de la International Scientific Committee of Ozonotherapy (ISCO3) (www.isco3.org). Miembro, Comité Editorial, Revista Española de Ozonoterapia.

Lawyer. International Relations Diploma. Political Sciences Doctor Former United Nations member. Legal Advisor of AEPROMO, IMEOF and ISCO3. Member Drafting Board, Spanish Journal of Ozone Therapy.

Ponencia: "Los avances legales en el mundo de la ozonoterapia y sus desafíos".

Lecture: "Legal developments in the world of ozone therapy and its challenges."

9:50 – 10:10 **Dr. Franklin E. Aular Montilla, MD (Venezuela)**

Traumatología y Ortopedia. Hospital Universitario de Caracas, Servicio de Cirugía de La Mano. Profesor Adjunto Cátedra de Traumatología y Ortopedia Universidad Central de Venezuela.

MD (Venezuela). Traumatology and Orthopedics. Caracas University Hospital, Department of Surgery of the Hand. Associate Professor Chair of Traumatology and Orthopedics. Central University of Venezuela.

Ponencia: "Venezuela, un caso especial para el desarrollo de la ozonoterapia."

Lecture: "Venezuela, a special case for the development of ozone therapy."

10:10 – 10:30 **Dr. Froylán Alvarado Güémez, MD (México)**

Presidente de la Asociación Mexicana de Ozonoterapia (AMAOZON, miembro de IMEOF). Profesor Asociado de Ozonoterapia, Facultad de Medicina de la Universidad Autónoma de Sinaloa (México). Miembro de AEPROMO. Miembro del Comité Internacional Científico de Ozonoterapia (ISCO3).

MD (México). President of the Mexican Association of Ozone Therapy (AMAOZON, member of IMEOF). Associated Professor of Ozonotherapy, Faculty of Medicine, Sinaloa Autonomous University. AEPROMO member. Member, International Scientific Committee of ozonotherapy (ISCO3).

Ponencia: "Bases científicas para el manejo del dolor con ozonoterapia"

Lecture: "Scientific basis for management of pain with ozone".

10:30 – 10:50 **Dr. Antonio Corralero Romaguera, MD (España - Spain)**

Anestesia-Reanimación y tratamiento del dolor. Experto Universitario en Ozonoterapia. Director médico, Clínica Unidolor . Tratamiento del dolor. Miembro de Aepromo.

Anesthesia-Reanimation and Pain Treatment. University Diploma in Ozone Therapy. Medical Director, Unidolor Clinic, Pain Management. Aepromo member.

Ponencia: "Memoria de una Unidad de tratamiento del dolor con terapias no convencionales"

Lecture: "Report from a Consulting room of pain treatment with non-conventional therapies"

IV International Congress of AEPROMO
"For a Professional Practice of Ozone Therapy"
Spanish Association of Medical Professionals in Ozone Therapy

10:50 – 11:05 **Preguntas-respuestas. Questions-answers.**

11:05 – 12:00 Descanso café y visitas exposición comercial. *Coffee brake and visit to commercial exposition.*

Moderadores - Chairpersons: Dr. Juan López Laserna-Ruiz (España), Froylán Alvarado (México)

12:00 - 12:20 **Dra. Renate Viebahn-Haensler, Bioquímica y Farmaceuta. (Alemania)**

Secretaria General de la Sociedad Médica Alemana para el Uso del Ozono en Prevención y Terapia y de la Cooperación Europea de Sociedades del Ozono Médico.

Germany. Bio-Chemistry & Pharmacology. General Secretary of the German Medical Society for the Use of Ozone in Prevention and Therapy and the European Cooperation of the Medical Ozone Societies.

Ponencia: "La artritis reumatoide como proceso inflamatorio crónica y la justificación del tratamiento de ozono"

Lecture: "Rheumatoid arthritis as chronic inflammatory process and the rationale of ozone treatment"

12:20 – 12:40 **Eugeni I. Nazarov (UKR).**

Dr. en Ciencias. Presidente de la Asociación Ucraniana de Ozonoterapeutas (miembro de IMEOF). Vicepresidente de la Unión Asia-Europea de Ozonoterapeutas.

Chemical (Ukraine).Dr. Sciences. Chairman of the Ukrainian Association Ozone Therapists (member of IMEOF). Vice-president of the Asian-European Union Ozone Therapists.

Ponencia: "Oxigenación extracorpórea con ozono"

Lecture: "Extracorporeal blood oxygenation and ozonization"

12:40 – 13:00 **Dr. Iván Pacheco, MD (Venezuela)**

Traumatología y Ortopedia. Jefe de la Unidad de Traumatología y Ozonoterapia Porlamar, Isla de Margarita - Venezuela.

MD (Venezuela). Orthopedist. Head, Porlamar Traumatology and Ozone Therapy Unit, Margarita Island, Venezuela.

Ponencia: "Tratamiento de Síndrome de espalda fallida con discosis percutánea mas Bloqueo Peridural con oxígeno-ozono"

Lecture: "Treatment of failed back syndrome with percutaneous discosis and Epidural Block with oxygen-ozone"

13:00 – 13:20 **Dr. Raúl Matera, MD (Argentina).**

Neurocirujano. Cirugía Mínimamente Invasiva de la Columna. Profesor adscripto de neurocirugía, Facultad de Medicina de la Ciudad de Buenos Aires. Presidente de la Fundación Matera. Presidente de AMAOO (Asociación Médica Argentina de Oxígeno Ozonoterapia, miembro de IMEOF).

MD (Argentina). Neurosurgeon. Minimally Invasive Spine Surgery. Neurosurgery adjunct professor, Faculty of Medicine of Buenos Aires City. President, Matera Foundation. President, AMAOO (Argentine Oxygen Ozone Therapy Medical Association, member of IMEOF).

Ponencia: "Ozonoterapia en zona de penumbra de los ataques cerebrovasculares isquémicos"

Lecture: "Ozone therapy in penumbra area of ischemic cerebrovascular attacks"

13:20 – 13:40 **Dra. Adriana Schwartz (España - Spain).**

Directora Clínica Fiorela, Madrid. Directora Científica Instituto Clínico Fiorela, San Pedro Sula (Honduras). Presidenta de AEPROMO. Presidenta de IMEOF. Secretaria del ISCO3 (International Scientific Committee of Ozone Therapy). Directora, Revista Española de Ozonoterapia. Subdirectora y profesora curso de "Experto Universitario en Ozonoterapia y Factores de Crecimiento Ozonizados". Universidad Rey Juan Carlos, Madrid, edición 2013-2014. Profesora del Módulo de Ozonoterapia, Máster en Medicina Estética y Anti-vejecimiento 2014. Universidad Complutense de Madrid.

MD (Spain). Director, Clínica Fiorela, Madrid. Scientific Director, Fiorela Clinical Institute, San Pedro Sula (Honduras). President, AEPROMO. President, IMEOF. Secretary, ISCO3 (International Scientific Committee of ozonotherapy). Director, Spanish Journal of Ozone Therapy. Deputy Director, course of "University diploma in Ozone Therapy and ozonated Growth Factors", Madrid, 2013-2014 edition. Professor Ozone Therapy Module, Master in Aesthetic and Anti-Aging Medicine 2014, Complutense University of Madrid.

Ponencia: Terapia combinada de Concentrados de Factores de Crecimiento Ozonizados Autólogos (CGF) y Ozonoterapia: Su aplicación en úlceras diabéticas y Medicina estética.

Lecture: Combination Therapy of Concentrate of Growth Factors (CGF) and Ozone: Its application in diabetic ulcers and in aesthetic medicine.

IV International Congress of AEPROMO
"For a Professional Practice of Ozone Therapy"
Spanish Association of Medical Professionals in Ozone Therapy

13:40 – 13: 55 **Preguntas-respuestas. Questions-answers.**

13:55 - 15:45 **Comida a cargo de cada participante.** Pueden comer a precio módico en el restaurante de estudiantes del Campus de Alcorcón, Universidad Rey Juan Carlos.

Lunch in charge of every participant who may have it at a low price at the Students Restaurant of the Campus of Alcorcón King Juan Carlos University.

Moderadores -Chairpersons: Dr. Raúl Matera (Argentina (España), Dr. Esteban González (España)

15:45 - 16:05 **Dr. Juan López-Laserna Ruiz, MD (España - Spain)**

Traumatología. Jefe, Unidad del Pie y Tobillo, Hospital San Juan de Dios, Córdoba. Presidente del Comité Científico del 4º Congreso de AEPROMO y 3º de IMEOF. Miembro de AEPROMO. Miembro Comité Editorial, Revista de la SEMPCT (Sociedad Española de Medicina y Cirugía del Pie y del Tobillo).

MD (Spain). MD. Traumatology. Chief, Foot and Ankle Unit, San Juan de Dios Hospital, Córdoba. President of the Scientific Committee of the 4th Congress of AEPROMO and 3rd of IMEOF. AEPROMO member. Member Editorial Board, Journal of the SEMCPT (Spanish Society of Medicine and Surgery of the Foot and Ankle).

Ponencia: "Artrodiastasis y descompresión canalicular, otro efecto del ozono médico"

Lecture: "Arthrodiastasis and canalicular decompression, another effect of medical ozone"

16:05 - 16:25 **Dr. Ruhi Cakir, MD (Turquía - Turkey)**

Pediatría- Medicina Familiar- Anti-vejecimiento en Medicina Preventiva. Mediozon Clínicas, Turquía. Miembro de ISCO3 (International Scientific Committee of ozonotherapy).

MD (Turkey). Pediatrics-Family Medicine- Anti-Aging in Preventive Medicine. Mediozon Clinics, Turkey. Member of ISCO3 (International Scientific Committee of ozonotherapy).

Ponencia: "Casos de inyecciones caudales y epidurales de ozono en el dolor lumbar"

Lecture: "Caudal and Epidural Ozone Injections in Low Back Pain Cases"

16:25 - 16:45 **Dr. Saltuk Aytacoglu, MD (Turquía - Turkey)**

Ginecología. Miembro de MODER (Asociación Turca de Ozono Médico, miembro de IMEOF).

MD (Turkey). Gynecology. Member of MODER (Turkish Medical Ozone Society, member of IMEOF).

Ponencia: "Ozono Sauna. ¿Podemos usarla en medicina?"

Lecture: "Ozone Sauna. Can we use it in medicine?"

16:45 – 17:15 **Dr. Sci. Eugeni I. Nazarov, Químico (Ucrania - Ukraine)**

Dr. en Ciencias. Presidente de la Asociación Ucraniana de Ozonoterapeutas (miembro de IMEOF). Vicepresidente de la Unión Asia-Europea de Ozonoterapeutas.

Chemical (Ukraine). Dr. Sciences. Chairman of the Ukrainian Association Ozone Therapists (member of IMEOF). Vice-president of the Asian-European Union Ozone Therapists.

Ponencia: "Teoría del efecto adaptogénico del ozono sistémico. ¿Por qué el ozono normaliza parámetros bioquímicos y fisiológicos?"

Lecture: "Adaptogenic theory of ozone therapy. Why as a result of exchange rate system procedures, ozone therapy normalize the biochemical and physiological characteristics of an organism?"

17:15 – 17:35 **Dr. Vincenzo Simonetti, MD (Italia - Italy)**

MD (Italia). PhD., Cirugía General.

MD (Italy). PhD., General surgery.

Ponencia: "¿Por qué la terapia de ozono en la esclerosis múltiple?"

Lecture: "Why ozone therapy in multiple sclerosis?"

17:35 - 17:50 **Preguntas-respuestas. Questions-answers.**

17:50 - 18:30 **Descanso café y visitas exposición comercial. Coffee brake and visit to commercial exposition.**

18:30 Primera convocatoria asamblea general ordinaria de AEPROMO. Aula Magna Aulario I, Campus de Alcorcón, Universidad Rey Juan Carlos. *First call, AEPROMO ordinary general assembly. Aula Magna Aulario I, Campus of Alcorcón, King Juan Carlos University*

19:30 Segunda convocatoria asamblea general ordinaria de AEPROMO. Aula Magna Aulario I, Campus de Alcorcón, Universidad Rey Juan Carlos. *Second call, AEPROMO ordinary general assembly. Aula Magna Aulario I, Campus of Alcorcón, King Juan Carlos University.*

20:30 **Fin de actividades primer día congreso / End first day congress activities**

IV International Congress of AEPROMO
"For a Professional Practice of Ozone Therapy"
Spanish Association of Medical Professionals in Ozone Therapy

Sábado 7 de junio - Saturday June 7th

Moderadores - Chairpersons: Dra Vivan Borroto (Cuba). Dra. Nora Bazzano (Argentina)

- 9.00 - 9:20 **Dr. Nabil Mawsouf, MD (Egipto - Egypt)**
Anestesiología. Director de la Unidad del Dolor, Universidad del Cairo. Presidente, Sociedad Egipcia Médica para Ozonoterapia y Desarrollo de Medicina Complementaria (miembro de IMEOF). Miembro de AEPROMO. Miembro del Comité Internacional Científico de Ozonoterapia (ISCO3).
MD (Egypt). Anesthesiology. Director of the Unit of Pain, University of Cairo. President, Egyptian Medical Society for Ozonotherapy and Complementary Medicine Development (Member of IMEOF). AEPROMO member. Member, International Scientific Committee of ozonotherapy (ISCO3).
Ponencia: "Efectos cardioprotectores del ozono oxidativo preconditionando en un modelo in vivo de lesión por isquemia / reperfusión"
Lecture: "Cardioprotective effects of ozone oxidative preconditioning in an in vivo model of ischemia/reperfusion injury"
- 9:20 – 9:40 **Dr. Umair Rashid Chaudhry, MD (Paquistán - Pakistan)**
M.Sc. Enfermedades neurovasculares. Jefe de Departamento de Neurorradiología, Hospital General del Gobierno de Lahore, Postgrado, Instituto Médico.
MD (Pakistan). M.Sc. Neurovascular Diseases. Head Department of Neuroradiology, Government Lahore General Hospital, Post Graduate Medical Institute.
Ponencia: "Historia de éxito de ozonucleolysis en lesiones discales en Paquistán"
Lecture: "Success story of ozonucleolysis in disc lesions in Pakistan"
- 9.40 – 10:00 **Dr. José Luis Calunga, MD (Cuba)**
MD. PhD en Ciencias Médicas. Fisiología Normal y Patológica. Profesor Facultad de Medicina, Instituto de Ciencia Básicas y Preclínicas Victoria de Girón. 17 publicaciones científicas. Profesor Principal de 40 Cursos de Postgrado de Ozonoterapia. Miembro del "Grupo Nacional de Ozonoterapia del Centro Nacional de Investigaciones Científicas de Cuba".
PhD in Medical Sciences. Normal and Pathological Physiology. Professor Faculty of Medicine, Institute of Basic Science and Victoria de Girón. 17 scientific publications. Senior Lecturer 40 Postgraduate ozone courses. Member of the "National Ozone Group of the Cuban National Center for Scientific Research".
Ponencia: "Ozonoterapia en la fibrosis pulmonar"
Lecture: "Ozone therapy in pulmonary fibrosis"
- 10.00. – 10:20 **Dra. Nora Bazzano, Odontóloga (Argentina)**
Odontopediatría
DDS (Argentina). Odontopediatrics.
Ponencia: "Un sustituto del Flúor. El Ozono protector de la cavidad oral."
Lecture: "A substitute of the Fluor. The protective ozone in the oral cavity."
- 10.20 – 10:40 **Dr. Mark T Weiser, Odontólogo (EUA)**
Odontología estética y reconstructiva. Director Clínica de Lime Technologies Group, Santa Bárbara, California. Miembro de IAOHD (International Association of Ozone in Healthcare and Dentistry).
DDS (USA). Aesthetic and reconstructive dentistry. Clinical Director Lime Technologies Group, Santa Bárbara, California. Member of the IAOHD (International Association of Ozone in Healthcare and Dentistry).
Ponencia: "Aplicaciones del ozono en la clínica dental – Una perspectiva de EUA"
Lecture: "Clinical Applications of Ozone in the Dental Clinic, a USA perspective"
- 10.40 – 11:00 **Dr Julian Holmes, Odontólogo (RU & Sudáfrica - UK & South Africa)**
Presidente, International Association for Ozone in Healthcare & Dentistry (IAOHD). Asesor científico, Ozone Association of South Africa. Authored or co-authored over 60 published papers. Holds two patents in South Africa.
Dentist ((UK & South Africa). President, International Association for Ozone in Healthcare & Dentistry (IAOHD). Scientific Officer to the Ozone Association of South Africa. Authored or co-authored over 60 published papers. Holds two patents in South Africa.
Ponencia: "Productos vegetales para el tratamiento del VIH; un nuevo enfoque para el tratamiento de esta enfermedad"
Lecture: "Plant-derived products in the treatment of HIV; a novel approach to treating this disease"
- 11:00 - 11:15 **Preguntas-respuestas. Questions-answers.**
- 11:15 - 12:15 Descanso café y visitas exposición comercial. *Coffee brake and visit to commercial exposition.*

IV International Congress of AEPROMO
"For a Professional Practice of Ozone Therapy"
Spanish Association of Medical Professionals in Ozone Therapy

Moderadores - Chairpersons: Dr. Humberto Loscertales (España).

12:15 - 12:35 **Dra. Viviana Clelia Lüdi Etchevarren, Odontóloga (España - Spain)**

Profesora Clínica de Patología y Terapéutica Dental II, Facultad de Medicina y Odontología, Universidad Santiago de Compostela (Galicia, España). Clínica Dental Socorro. Inventora: Aguja y cubetas microperforadas.

Dentist (Spain). Clinical Professor of Dental Pathology and Therapeutics II, Faculty of Medicine and Dentistry, Santiago de Compostela University (Galicia, Spain). Dental Clinic Socorro. Inventor: microperforated needles and cuvettes.

Ponencia: "Avances en odontología y ozonoterapia, efecto del ozono gaseoso en biopelículas de enterococcus faecalis, estudio in vitro"

Lecture: "Advances in dentistry and ozone therapy, effect of gaseous ozone in Enterococcus faecalis biofilms, in vitro study"

12:35 - 12:55 **Prof. Velio Bocci, MD (Italia)**

Profesor Emérito de Fisiología de la Universidad de Siena. Miembro Honorario de AEPROMO. Presidente de ISCO3 (Comité Internacional Científico de Ozonoterapia). Miembros del Comité Editorial de la Revista Española de Ozonoterapia.

MD. Italy. Emeritus Professor of Physiology at the University of Siena. Honorary Member of AEPROMO. President of ISCO3 (International Scientific Committee of ozonotherapy.) Member, Editorial Committee, International Journal of Ozone Therapy.

Ponencia: "El valor terapéutico de la ozonoterapia"

Lecture: "The therapeutic value of ozonotherapy"

12:55 - 13:15 **Dr. Gregorio Martínez Sánchez (Italia)**

Farmacéuta. Ph.D. Ciencias Farmacéuticas. Experto en Estrés Oxidativo. Miembro de AEPROMO. Miembro de ISCO3. Miembro Consejo Redacción, Comités Editorial y Evaluador, Revista Española de Ozonoterapia. Profesor del curso de "Experto Universitario en Ozonoterapia y Factores de Crecimiento Ozonizados". Universidad Rey Juan Carlos, Madrid, edición 2013-2014.

Pharmacist (Italy). Ph.D. Pharmaceutical Sciences. Member of AEPROMO. Member of ISCO3 (International Scientific Committee of ozonotherapy). Member of Editorial Board, Editorial Committees and Appraiser Committee of the Spanish Journal of Ozone Therapy.

Ponencia: "Las bases moleculares de los efectos del ozono. Nuevos avances"

Lecture: "Molecular basis of the effects of ozone. New advances"

13:15 - 13:35 **Dr. Manuel Gómez Moraleda, Químico (España)**

PhD en Ciencias Químicas. Medozono S.L. Director Fundador del Centro de Investigaciones del Ozono de Cuba. , Miembro de AEPROMO.

Chemical (Spain). PhD in Chemistry. Medozono S.L. Founding Director of the Cuban Ozone Research Center. Member of AEPROMO.

Ponencia: "La regulación del estrés oxidativo en la ozonoterapia. Comparación con otras terapias y situaciones frecuentes"

Lecture: "The regulation of oxidative stress in the ozone therapy. Comparison with other therapies and frequent situations"

13:35 - 13:50 **Preguntas-respuestas. Questions-answers.**

13:50 - 15:50 **Comida a cargo de cada participante.** Pueden comer a precio módico en el restaurante de estudiantes del Campus de Alcorcón, Universidad Rey Juan Carlos.

Lunch in charge of every participant who may have it at a low price at the students restaurant of the Campus of Alcorcón King Juan Carlos University.

Moderadores / Chairpersons: Dr. Gregorio Martínez (Italia). Dr. Nabil Mawsouf (Egipto)

15:50 - 16:10 Iván Pacheco (VEN).

Traumatología y Ortopedia. Jefe de la Unidad de Traumatología y Ozonoterapia Porlamar, Isla de Margarita - Venezuela.

MD (Venezuela). Orthopedist. Head, Porlamar Traumatology and Ozone Therapy Unit, Margarita Island, Venezuela.

Ponencia: Tratamiento de hernia discal lumbar con oxígeno-ozono guiada con tomografía

Lecture: "Treatment of lumbar disc herniation with ozone-oxygen guided by tomography"

16:10 - 16:30 **Prof. Sergey Peretyagin, MD (Rusia)**

Instituto de Investigación de Traumatología y Ortopedia de la Academia Estatal de Medicina de Nizhny Novgorod, Rusia. Presidente de la Asociación Rusa de Ozonoterapia, miembro de IMEOF. Miembro del Comité Internacional Científico de Ozonoterapia (ISCO3).

MD (Russia). Nizhny Novgorod Research Institute of Traumatology and Orthopaedics, Nizhny Novgorod State Medical Academy, Russia. President of the Russian Association of Ozone Therapy which is member of IMEOF. Member, International Scientific Committee of ozonotherapy (ISCO3).

Ponencia: "Optimización bioenergética como mecanismo clave de los efectos de la ozonoterapia en la patología urgente"

Lecture: "Bioenergetics optimization as a key mechanism of ozone therapy effects at urgent pathology."

IV International Congress of AEPROMO
"For a Professional Practice of Ozone Therapy"
Spanish Association of Medical Professionals in Ozone Therapy

- 16.30 – 16:50 **Dra. Emma Borelli, MD (Italy)**
Ph.D. Enfermedad Pulmonar. Departamento de Biotecnologías Técnicas, Universidad de Siena.
MD (Italy). Ph.D. Pulmonary Disease. Department of Medical Biotechnologies, Siena University, Italy.
Ponencia: "Oxígeno ozonoterapia como tratamiento integrado de la enfermedad pulmonar obstructiva crónica: Estudio preliminar"
Lecture: "Oxygen ozone therapy as integrated treatment of chronic obstructive pulmonary disease: a preliminary study"
- 16:50 - 17:10 **Dr. Santos Martín, MD (España)**
Clínica Dr. Santos, Granollers, Cataluña, España.
MD (Spain). Dr. Santos Clinic. Granollers, Catalogna, Spain.
Ponencia: "¿Tiene efecto el ozono en aplicación por insuflación rectal en el metabolismo de las estronas en mujeres postmenopausicas y en mujeres afectadas de neoplasia mamaria – tanto pre como post menopáusicas – hormonoreceptoras positivas?"
Lecture: "Does ozone have effect in rectal insufflation application in the estrone metabolism in postmenopausal women and in women with mammary neoplasia - both pre and post menopausal - positive hormone receptors?"
- 17:10 - 17:25 **Preguntas-respuestas. Questions-answers.**
- 17:25 - 18:25 Descanso café y visitas exposición comercial. *Coffee brake and visit to commercial exposition.*
- Moderadores / Chairperson: Dr. Antonio Corralero (España - Spain). Dr. Franklin Aular (Venezuela).**
- 18.25 – 18:45 **Dra. Oksana Bitkina, MD (Rusia)**
Ph.D. Instituto de Investigación Dermatovenereal, Academia Médica Estatal, Nizhny Novgorod (Rusia). Miembro, Asociación Rusa de Ozonoterapia, miembro de IMEOF. Miembro de ISCO3 (Comité Internacional Científico de Ozonoterapia).
MD. Russia. Ph.D. Nizhny Novgorod State Medical Academy, Nizhny Novgorod Research Dermatovenereal Institute. Member of ISCO3 (International Scientific Committee of Ozone Therapy).
Ponencia: "La ozonoterapia en la práctica demartológica"
Lecture: "Ozone therapy in dermatological practice"
- Moderadores / Chairperson: Dr. Antonio Corralero (España - Spain). Dr. Franklin Aular (Venezuela).**
- 18:45 - 19:05 **Dra. Vet. Mercedes Hernández Avilés, VET (España)**
Veterinaria clínica. Especialista en pequeños animales. Directora, Clínica Veterinaria Dramp. Miembro de AEPROMO.
VET (Spain). Veterinary clinic. Specialist in small animals. Director, Veterinary Clinic Dramp. Member of AEPROMO.
Ponencia: "Importancia de la Ozonoterapia en veterinaria. Casos clínicos"
Lecture: "Importance of Ozone therapy in veterinary. Clinical cases"
- 19:05 - 19:25 **Dr. Víctor Pereyra, MD (Argentina)**
Neurocirugía. Unidad de Ozonoterapia, Fundación Matera, Tandil, Argentina.
MD (Argentina). Neurosurgeon ozone unit foundation Matera Tandil Argentina
Ponencia: "Ozonoterapia en quistes hidatídicos de medula espinal"
Lecture: "Ozonotherapy in hydatid cysts of spinal cord".
- 19:25 - 19:45 **Dra. Tetiana Barkhotkina, MD (Ucrania)**
Ph.D otorinolaringología. Profesora Electrónica Biomédica, Kharkov Universidad Politécnica Nacional de Járkov (Ucrania). Miembro, Asociación Ucraniana de Ozonoterapia (miembro de IMEOF). Patente del "tratamiento de la sordera neurosensorial"
MD (Ukraine). Ph.D. Otolaryngology. Professor Biomedic Electronic, Kharkov National Politecnic University (Ukraine). Member of the Ukrainian Association of Ozone Therapy (Member of IMEOF). Patent: The treatment mode of sensorineural deafness.
Ponencia: "Los características de la aplicación ozonoterapia en la práctica del médico-otorrinolaringólogo."
Lecture: "Application features of ozonotherapy in the practice of the otolaryngologist."
- 19:45 - 20:00 **Preguntas-respuestas. Conclusiones generales. Questions-Answers. General conclusions.**

Plenary lecture index

Friday, 6

Roberto Quintero Mariño (SPA)	Legal developments in the world of ozone therapy and its challenges
FranklinE Aular Montilla (VEN).	Venezuela, a special case for the development of ozone therapy
Froylán Alvarado Güémez (MEX)	Scientific basis for management of pain with ozone
Antonio Corralero Romaguera (SPA).	Report from a Consulting room of pain treatment with non-conventional therapies
Eugene I. Nazarov (UKR).	Extracorporeal blood oxygenation and ozonization.
Renate Viebahn-Hänsler (GER)	Rheumatoid arthritis as chronic inflammatory process and the rationale of ozone treatment
Iván Pacheco (VEN).	Treatment of failed back syndrome with percutaneous discolisis and Epidural Block with oxygen-ozone
Raúl Matera (ARG).	Ozone therapy in penumbra area of ischemic cerebrovascular attacks
Adriana Schwartz Tapia (SPA)	Combination Therapy of Concentrate of Growth Factors (CGF) and Ozone: Its application in diabetic ulcers and in aesthetic medicine. Arthrodiastasis and canalicular decompression, another effect of medical ozone
Juan López-Laserna Ruiz (SPA)	
Ruhi Carkir(TUR).	Caudal and Epidural Ozone Injections in Low Back Pain Cases
Saltuk Aytacoglu (TUR).	Ozone Sauna.Can we use it in medicine?
Eugene I. Nazarov (UKR).	Adaptogenic theory of ozone therapy. Why as a result of exchange rate system procedures, ozone therapy normalize the biochemical and physiological characteristics of an organism?
Vicenzo Simonetti (ITA).	Why ozone therapy in multiple sclerosis?

IV International Congress of AEPROMO
"For a Professional Practice of Ozone Therapy"
Spanish Association of Medical Professionals in Ozone Therapy

Saturday, 7

Nabil Mawsouf (EGY)	Cardioprotective effects of ozone oxidative preconditioning in an in vivo model of ischemia/reperfusion injury
Umair Rashid Chaudhry (PAK). Nora Bazzano (ARG).	Success story of ozonucleolysis in disc lesions in Pakistan A substitute of the Fluor. The protective ozone in the oral cavity
Mark T Weiser (USA).	Clinical Applications of Ozone in the Dental Clinic, a USA perspective
Julian Holmes (GBR – ZAF).	Plant-derived products in the treatment of HIV: a novel approach to treating this disease
Viviana Clelia Lüdi Etchevarren (SPA).	Advances in dentistry and ozone therapy, effect of gaseous ozone in Enterococcus faecalis biofilms, in vitro study
Velio Bocci (ITA)	The therapeutic value of ozonotherapy
Gregorio Martínez-Sánchez(CUB) Manuel Gómez Moraleda (SPA).	Molecular basis of the effects of ozone. New advances The regulation of oxidative stress in the ozone therapy. Comparison with other therapies and frequent situations
Iván Pacheco (VEN) Sergey Peretyagin(RUS)	Treatment of lumbar disc herniation with ozone-oxygen guided by tomography Bioenergetics optimization as a key mechanism of ozone therapy effects at urgent pathology
Emma Borelli (ITA).	Oxygen ozone therapy as integrated treatment of chronic obstructive pulmonary disease: a preliminary study
Santos Martín (SPA).	Does ozone have effect in rectal insufflation application in the estrone metabolism in postmenopausal women and in women with mammary neoplasia - both pre and post menopausal - positive hormone receptors?
Oksana Bitkina (RUS)	Ozone therapy using in dermatological practice. Russian experience
Mercedes Hernández Avilés (SPA)	The importance of ozone therapy in clinical veterinary practice. Case reports

Plenary lecture

Legal developments in the world of ozone therapy and its challenges

Roberto Quintero Mariño.

Legal Advisor of the: Spanish Association of Medical Professionals in Ozone Therapy (AEPROMO, www.aepromo.org), International Medical Ozone Federation (IMEOF, www.imeof.org) and the International Scientific Committee of Ozone Therapy (ISCO3) www.isco3.org

The history indicates that it has been quite difficult for the ozone therapy to have a positive and significant presence in health legislation. Even in a few countries ozone therapists have been prosecuted by the health authorities.

From nothing to something: In 2005 there was no any legal provision on ozone therapy in any country of the world. In 2014 ten countries have already adopted provisions for its practice: Cuba, China, Dubai of the UAE, Honduras, Italy (3 regions out of 20), Oman, Portugal, Russia, Spain (15 communities out of 17), and Turkey. A comparative legal review provides a panoramic view of the legal status that the ozone therapy has in each of the countries analyzed.

Challenges to the ozone therapy

Legal challenges. We know that in about 50 nations ozone therapy is practiced. However only in ten of them there are administrative provisions for its practice. It is necessary to strengthen the regulatory process of the therapy.

Administrative challenges: Ozone therapy has been absent in administrative researches conducted by countries on therapies practiced in their territories. One research sponsored by the European Union and another one by Spain on alternative or complementary therapies do not include ozone therapy. Another on back pain conducted under the auspices of the European Union did not include it.

Bureaucratic challenges. Existing health administrative rules may be applied to the detriment of ozone therapy. In Catalonia (Spain) the authorities intend to place the autohemotherapy under the rules of hemodonación. In the U.S. the FDA has taken a position against the medical use of ozone.

Training challenges. Ozone therapy is a "medical act" that needs to be practiced by well trained professionals and with expertise. Training courses should be well organized and with proven quality teachers.

Unified practices challenges. Ozone therapy has to be practiced in accordance with previously adopted protocols by the appropriate forums and according to scientific advances.

Research challenges. Pharmaceutical companies do not support the practice of ozone because it goes against their economic interests.

Associative challenges. The relatively small world of ozone therapy is fragmented. There are countries where there are up to three associations of ozone therapy.

Type of Presentation: Oral Presentation

Key words: Ozone Therapy, health legislation, provisions, regulatory process, legislation, challenges, associations.

Conferencia Plenaria

Los avances legales en el mundo de la ozonoterapia y sus desafíos

Roberto Quintero Mariño.

Asesor Legal de la Asociación Española de Profesionales Médicos en Ozonoterapia (AEPROMO, www.aepromo.org), el International Medical Ozone Federation (IMEOF, www.imeof.org) y el International Scientific Committee of Ozone Therapy (ISCO3) www.isco3.org

La historia indica que ha sido muy difícil para la ozonoterapia tener una presencia positiva y significativa en la legislación sanitaria. Incluso en algunos países los ozonoterapeutas han sido perseguidos por las autoridades sanitarias.

De nada a algo. En 2005 no había ninguna regulación en la terapia de ozono en ningún país del mundo. En 2014 ya hay diez países que han adoptado disposiciones para su práctica. Cuba, China, Dubai de los Emiratos Árabes Unidos, Honduras, Italia (en 3 regiones de 20), Omán, Portugal, Rusia, España (en 15 comunidades de 17) y Turquía. Una revisión de derecho comparado ofrece una vista panorámica de la situación jurídica que la ozonoterapia tiene en cada uno de los países analizados.

Desafíos de la ozonoterapia

Desafíos legales. Sabemos que en cerca de 50 naciones se practica la ozonoterapia. Sin embargo en solo diez hay normas administrativas sobre su práctica. Es necesario intensificar el trabajo de regulación.

Desafíos administrativos. La ozonoterapia ha estado ausente en las investigaciones administrativas que los estados realizan sobre terapias practicadas en sus territorios. Una investigación patrocinada por la Unión Europea y otra por España sobre terapias alternativas o complementarias no incluyó a la ozonoterapia. Otra sobre el dolor de espalda realizada bajo los auspicios de la Unión Europea tampoco la incluyó.

Desafíos burocráticos. Las normas sanitarias vigentes pueden aplicarse en detrimento de la ozonoterapia. Es el caso de Cataluña donde las autoridades pretenden ubicar a la autohemoterapia bajo la normativa de la hemodonación. En Estados Unidos la FDA ha adoptado una posición en contra de la utilización médica del ozono.

Desafíos asociativos. El mundo relativamente pequeño de la ozonoterapia se encuentra fragmentado. Hay países en donde existen hasta tres asociaciones de ozonoterapia.

Desafíos formativos. La ozonoterapia es un "acto médico" que requiere ser practicada por profesionales de la salud debidamente formados y con experiencia. Los cursos de formación deben ser bien organizados y con profesores de calidad demostrada.

Desafíos de prácticas unificadas. La ozonoterapia exige que se practique de acuerdo a protocolos previamente adoptados en los foros adecuados y de acuerdo a los avances científicos.

Desafíos investigativos. Las empresas farmacéuticas no apoyan la práctica de la ozonoterapia porque va en contra de sus intereses económicos.

Plenary lecture

Venezuela, a special case for the development of ozone therapy

Franklin E. Aular Montilla

Hospital Universitario de Caracas, Servicio de Cirugía de La Mano.

Ozonotherapy in the world is growing and developing rapidly in recent years. This has alone its own enemies, a therapy that does not use drugs and decreases the number of surgeries, it's hard to articulate with a world that sometimes organizes its health services as a big issue. Venezuela, a country where medical and Scientific activities are subordinated to strong political interests, where the private and the public health system are collapsed, where the difficulties in obtaining foreign currency to get supplies for health are common and most importantly, serious national problems sometimes do forget the importance that Ozonotherapy has for the patients, must be thought with creative and practical solutions against all odds. A new proposal so that the government can use the ozone therapy as the way to accomplished population's health and ingenious ideas to integrate, assemble and connect to new professionals interested in ozone therapy practice appear to advance and develop the Medical Ozone in the country, the situation analysis of the practice of Ozone in Venezuela.

Conferencia Plenaria

Venezuela, un caso especial para el desarrollo de la ozonoterapia

Franklin E. Aular Montilla

Hospital Universitario de Caracas, Servicio de Cirugía de La Mano.

La Ozonoterapia a nivel mundial ha mostrado un desarrollo importante durante estos últimos años. La misma tiene por sí sola sus propios enemigos, una terapia que no usa medicamentos y disminuye el número de intervenciones quirúrgicas, no le es fácil integrarse a un mundo que muchas veces organiza sus servicios de salud con los principios de un gran negocio. Venezuela, un país donde las actividades médicas, gremiales y científicas se encuentran regidas por entes estatales con fuertes intereses políticos, donde el sistema de salud público y privado está colapsado, la dificultad para obtener divisas para importar insumos para la salud es el día a día y sobre todo, los graves problemas nacionales a veces hacen olvidar la importancia que una herramienta terapéutica como la Ozonoterapia puede tener para los pacientes. Hay que luchar con creatividad y soluciones prácticas contra todos esos obstáculos, con nuevas propuestas de cómo el estado puede utilizar la ozonoterapia como vehículo para llevar salud a la población e ingeniosas maneras de ir integrando, agrupando y conectando a los nuevos profesionales interesados en la Ozonoterapia surgen con la intención de avanzar y desarrollar el Ozono Médico en el País, Análisis Situacional de la Ozonoterapia en Venezuela.

Scientific basis for pain management with ozone

Froylán Alvarado Güémez

President of the Mexican Association of Ozone Therapy (AMOZON) www.amozon.org.mx

Member of the International Scientific Committee on Ozone (ISCO3 / International Scientific Committee of Ozone Therapy) www.isco3.org

Email: info@amazon.org.mx // Tel: +52-667-7531584 / Culiacán, Sinaloa, México

In 1876, for first time in Russia, the Kazan University B. Chemezov performed scientific research on the influence of ozone in animal tissues by passage through subcutaneous cellular tissue, watching first vasoconstriction, then an effect vasodilator, as well as dehydration and inhibition of peripheral nerves¹.

The first medical application appears to have been its use for the treatment of post-traumatic gas gangrene in German soldiers during the First World War (1914-1918). However, a huge step was taken by physical Hänslér Joachim (1908-1981) with the invention in 1950 of a reliable ozone generator for medical purposes².

Researches in XX Century on the properties of ozone showed that it can react with most organic and inorganic substances until complete oxidation, and are established selective influence of ozone on substances that have double and triple bonds, as part of the composition of the plasma lipoprotein complexes of bilayers and cellular membranes. The reactions with these compounds underlying the biological effects of ozone and have meaning in the pathology of various diseases³.

The aim of this paper is to explain based on a thorough literature review different mechanisms to explain the analgesic and anti-inflammatory effects triggered by therapeutic applications of ozone^{4,5,6,7,8,9} and presented a series clinical cases of clinical practice of the author, of painful disease of diverse etiology that exemplify these mechanisms described.

Conferencia Plenaria

Bases científicas para el manejo del dolor con ozonoterapia

Froylán Alvarado Güémez

Presidente de la Asociación Mexicana de Ozonoterapia (AMOZON) www.amozon.org.mx Miembro del Comité Científico Internacional de Ozonoterapia (ISCO3 / International Scientific Committee of Ozone Therapy) www.isco3.org Email: info@amozon.org.mx // Tel: +52-667-7531584 / Culiacán, Sinaloa, México

En 1876, en Rusia, la Universidad Kazán B. Chemezov condujo investigaciones científicas acerca de la influencia del ozono en los tejidos de animales mediante su paso a través de tejidos celulares subcutáneos, observando en primer lugar una vasoconstricción, y a continuación un efecto vasodilatador, así como también la deshidratación y la inhibición de los nervios periféricos¹. La primera aplicación médica a gran escala fue su uso para el tratamiento de gangrena gaseosa postraumática en soldados alemanes durante la primera guerra mundial (1914-1918). Pero no fue sino hasta la década de 1950 que Joachim Hansler (1908-1981) fabricó un generador de ozono confiable para su uso en medicina, que ha servido de prototipo para los actuales generadores de ozono de uso médico².

Las investigaciones realizadas en el siglo XX sobre las propiedades del ozono demostraron que es capaz de reaccionar con la mayoría de las sustancias orgánicas e inorgánicas hasta su oxidación completa, y se estableció la influencia selectiva del ozono sobre las sustancias que poseen enlaces dobles y triples, que forman parte de la composición de los complejos lipoproteicos del plasma y de las bicapas de las membranas celulares. Las reacciones con estos compuestos fundamentan los efectos biológicos de la ozonoterapia y tienen un significado en la patología de diversas enfermedades³. El objetivo de este trabajo es tratar de explicar en base a una minuciosa revisión bibliográfica los distintos mecanismos que permitan explicar los efectos analgésicos y antiinflamatorios desencadenados por las aplicaciones terapéuticas del ozono^{4, 5,6,7,8,9,10} y se presentan una serie de casos clínicos de la práctica clínica del autor, de patología dolorosa de diversa etiología que ejemplifican estos mecanismos descritos.

Report from a Consulting room of pain treatment with non-conventional therapies

Antonio Corralero Romaguera (SPA). María del Valle Navajas Lopera ATS-DE

Introduction: Patients with various forms of pain during the period from January 2011 to December 2103. Grouped by pathology. Applying protocols designed for each pathology (ozone therapy, homotoxicology and orthomolecular nutrition).

Methods and materials: 450 patients with the following pathologies: Herniated disc (Lumbar, cervical, mixed) 102 (22.5%). Osteoarthritis (knee, shoulder and hip) 150 (33.3%). Tendon inflammation (shoulder, elbow, knee) 50 (11.1%). Hip bursa inflammation 6 (1.3%). Migraines 38 (8.4%). Fibromyalgia 22 (4.9%). Pain not classified 4 (0.9%) Dermal ulcers (varicose, diabetic) Candidiasis and Cancer 79 (17.6%). Specific protocol with ozone therapy (Autohemotransfusion, paravertebral, intra-articular). Homotoxic medication (Dr. Reckeweg, Heel) and orthomolecular nutrition (Nutergia, Orthomol), also in different pathologies the use of PRGF are protocolled. We prescribed between eight to ten sessions with a frequency at the beginning of two weekly going on a weekly or bi-weekly, by varying the number of sessions in cases such as ulcers, candidiasis or cancer.

Results: Rated by patients: decrease of pain, significant reduction or elimination of allopathic medication, increased mobility and general condition. The treatment was effective or very effective in 364 patients (80.8%). In 86 patients (19.2%) there were no positive results, however 63 patients in this group had abandoned the treatment before the fifth session.

Discussion: In our experience this type of treatment, with less aggressiveness and side effects in comparison with allopathic medicine, has obtained very encouraging results. We must continue studying different protocols.

Conferencia Plenaria

Memoria de una Unidad de tratamiento del dolor con terapias no convencionales

Antonio Corralero Romaguera (SPA). María del Valle Navajas Lopera ATS-DE

Introducción: Pacientes aquejados de distintas formas de dolor durante el periodo comprendido entre enero del 2011 a diciembre del 2103. Agrupados por padecimientos. Se aplican protocolos diseñados para cada patología (Ozonoterapia, Homotoxicología y Nutrición Ortomolecular).

Métodos y materiales: 450 pacientes con las siguientes patologías Hernia discal (Lumbar, cervical, mixta)102 (22,5%). Artrosis (Rodilla, hombro y cadera) 150 (33,3%). Tendinitis (Hombro, codo, rodilla) 50 (11,1%). Bursitis de cadera 6 (1,3%). Migrañas 38 (8,4%). Fibromialgia 22 (4,9%). Dolor no filiado 4 (0,9%) Misceláneas (Úlceras varicosas, diabéticas, Candidiasis, Cáncer) 79 (17,6 %). Protocolo específico con Ozonoterapia (Autohemotrasfusión, paravertebral, intraarticular). Medicación Homotóxica (Dr. Reckeweg, Heel) y Nutrición Ortomolecular (Nutergia, Orthomol), también en las distintas patologías está protocolizado el uso de PRFC . Se prescriben entre ocho y diez sesiones con una frecuencia al inicio de dos semanales pasando a una semanal y/o quincenal, variando el número de sesiones en casos como las úlceras, fibromialgia, candidiasis ó cáncer.

Resultados: Valorados por los propios pacientes: disminución de los dolores, reducción significativa o supresión de medicación alopática, aumento de la movilidad y estado general. El tratamiento fue efectivo o muy efectivo en 364 pacientes (80,8%). En 86 pacientes (19,2%) no hubo resultados positivos, sin embargo 63 pacientes de este grupo habían abandonado el tratamiento antes de la quinta sesión.

Discusión: En nuestra experiencia estamos ante un tratamiento que con, menos agresividad y efectos secundarios que los que ofrece la medicina alopática, obtiene resultados bastante esperanzadores. Hay que continuar profundizando en el estudio de los distintos protocolos.

Rheumatoid arthritis as chronic inflammatory process and the rationale of ozone treatment

Renate Viebahn-Hänsler

Medical Society for the Use of Ozone in Prevention and Therapy, Germany. Secretary's office: Nordring 8, D-76473 Iffezheim/Baden-Baden. E-mail: renaviebahn@t-online.de

In Rheumatoid Arthritis, as part of a complementary therapeutical concept, in addition to the conventional basic therapy ozone reveals its antiinflammatory activity by reducing chronic oxidative stress and by immunomodulation. As shown in an animal model as well as in a clinical study oxidative stress is downregulated by intraarticular ozone injections as well as the crucial cytokines IL-1 and TNF- α **.

The regulation of the mRNA (IL-1 and TNF- α) again strengthens the mechanisms of action (low-dose ozone concept) on which the „guidelines of the use of medical ozone“ are based: being a strong oxidant itself, ozone interrupts the vicious circle of the inflammatory process via formation of „ozone peroxides“, reduction by cysteine residues and/or glutathion (GSH), -bypassing SOD and CAT consumption- signal transduction and regulation through Nrf2 (antioxidants) and NFkB (immunoregulation).

The pathological concentrations of stress-relevant parameters (H₂O₂, MDA malone dialdehyde, TH total hydroperoxide...) decrease significantly as well as IL-1, IL-6, TNF- α and as a consequence the clinical conditions improve and the drug consumption will be reduced.

Treatment of lumbar disc herniation with ozone-oxygen guided by tomography

Iván Pacheco

Head of the trauma unit and ozone therapy of Porlamar, Margarita Island, Venezuela. Treasurer of the Venezuelan society of ozone therapy. Orthopedist.

Objective: This prospective study is to demonstrate that the percutaneous nucleolysis with oxygen - ozone is effective, and very safe for treatment of hernias of the lower lumbar segment that cause discogenic pain.

Materials and Methods : Prospective study of 85 patients with symptomatic lumbar disc herniation to whom there were performed a total of 85 percutaneous nucleolysis paraforaminal with O₂ -O₃ from June 2011 to June 2013, all nucleolysis were performed under control of tomographic guide, strict measures of asepsis and antisepsis, conscious sedation. All patients were administered O₂ -O₃ paraforaminal 20ug (5-10 ml) plus procaine at 2% and 1cc 40mg of steroidal crystals, all cases were administered 1GS of cefacidal as prophylaxis. The effectiveness of treatment is based on pain control by baseline visual analog scale (eva 0) , at 6 (Eva 1) , at 12 (Eva 3) and 24 months (Eve 6) and by the nucleolysis oswestry scale assessed before treatment and at the end of it. All patients were survey conducted at the first visit and after the end of treatment with satisfactory response.

Results: 85 percutaneous lumbar nucleolysis 85 patients were performed initial Eva was 7.78 + 0.99 and the evolution at 6, 12 months and 24 months was: 2.43 + 2, 19, 1.80 + 2.31 and 2.07 + 2.49. The initial rate of mild oswestry disability: 10%, moderate disability: 30%, severe disability: 58%, very severe disability: 2%. After mild disability was 1%, moderate disability: 6%, severe disability: 10%, very severe disability: 0% with a statistically significant reduction in all three cuts. None of the patients had adverse effects, in terms of satisfaction expressed by patients 61 for excellent (72%), 18 for good (21%), 6 regular for (7%).

Conclusions: Percutaneous nucleolysis with oxygen-ozone is safe and highly effective in the treatment of lumbar disc herniation pain by technique with discogenic pain.

Conferencia Plenaria

Tratamiento de Síndrome de espalda fallida con discolisis percutánea más Bloqueo Peridural con oxígeno-ozono.

Iván Pacheco

Jefe de la unidad de traumatología y ozonoterapia Porlamar isla de margarita - Venezuela. Tesorero de la sociedad venezolana de ozonoterapia. Traumatólogo ortopedista.

Objetivo: Este estudio prospectivo es demostrar que la discolisis percutánea mas el bloqueo Peridural con oxígeno-ozono es efectiva, muy segura para disminuir el dolor producido por síndrome de espalda fallida.

Materiales y métodos: estudio prospectivo 45 pacientes con síndrome de espalda fallida a los que se realizo un total de 45 nucleolisis percutánea mas bloqueo Peridural con O₂-O₃ durante un periodo comprendido entre mayo 2012 a mayo del 2013 todas las discolisis se realizaron bajo control fluoroscopio con medidas de asepsia y antisepsia estrictas, sedación consciente. Todos los pacientes Se administro O₂-O₃ en disco y espacio Peridural 20ug (5-10 mL) más procaina al 2% mas 1cc de 40mg de cristales esteroideos, en todos los casos se administro 1gs de cefacidal como profilaxis. La eficacia del tratamiento se basa en el control del dolor según la escala visual analógica basal (eva0), a los 30 días(Eva 1), a los seis(Eva 3) y los 12 meses(Eva 6) Todos los pacientes se les realizo encuesta en la primera consulta y luego del final del tratamiento con respuesta satisfactoria.

Resultados: Se realizaron 45 discolisis percutánea lumbar mas bloqueo Peridural a 45 pacientes la Eva inicial fue de $7,78 \pm 0,99$ y la evolución al mes, a los 6 meses y a los 12 meses fue: $2,43 \pm 2,19$, $1,80 \pm 2,31$ y $2,07 \pm 2,49$. Ningún paciente presento efectos adversos en cuanto a la satisfacción expresada por los pacientes excelente para 24 (53%), bueno para 13(29%) y regular 8(18%).

Conclusiones: la cirugía de columna no siempre es exitosa; el 65% de todas las columnas operadas anualmente continúan con algún grado de dolor incapacitante se necesita una estrategia precisa y sin ambigüedades para su manejo, es muy importante prevenir cirugías inapropiadas, en cuanto sea posible.la respuesta a la discolisis percutánea con ozono es muy buena alternativa para el tratamiento de este síndrome tan temido.

Ozone therapy in penumbra area of ischemic cerebrovascular attacks

[Ozonoterapia en zona de penumbra de los ataques cerebrovasculares isquémicos]

Víctor Pereyra and Raúl Matera

Unidad de ozonoterapia Fundación Matera.

Introducción: Según la organización mundial de la salud el ataque cerebrovascular se define como la instalación aguda o rápida de signos clínico que reflejan una disfunción focal o global del cerebro de causa vascular. La tasa de incidencia anual que registran los principales estudios epidemiológicos en promedio son 200 casos nuevos por 100.000 habitantes por año. La tasa de prevalencia en el mundo es aproximadamente 500 a 700 por 100000 habitantes.

Diasquisis y penumbra Se define a las regiones del SNS con hipofunción como consecuencia de lesiones en otras regiones distantes unidas por conexiones nerviosas (deaferentación). Es un proceso reversible contralateral como la diasquisis cerebelosa cruzada DCC que desaparece a los pocos días no la lesión primaria. Lesión de células que envían sus axones desde aéreas isquémicas fenómeno conocido como muerte exofocal postisquemica.dentro del area de penumbra existen dos areas, una próxima a necrosarse cerca del centro donde la isquemia a sido severa y prolongada y otra periférica vecina al tejido sano que debe contribuir a la recuperación funcional . Duración de la penumbra. La ventana terapéutica es de 4-8 h para evitar la extensión dentro del infarto, asimismo las citocinas antiinflamatorias IL'1ra IL'6 se siguen elevando por 3 días material y métodos- Se efectuaron durante periodos 2006-2013 a 500 pacientes con ACV isquémico tratamiento con autohemoterapia dentro de la ventana terapéutica como 6'8 h etapa de reperfusión, 24h 17 días evitar extensión de área de necrosis e infarto final, 3 meses ventana de recuperación funcional. En todos se efectuaron controles seriados tomográficos, resonancia por difusión con O3 desde 2011-2013- Se valorizaron con escalas de AVC, índice de Barthel, escala de calidad de vida pos-infarto cerebral, escala de Rankin.

Resultados:

Los pacientes con ACV isquémico en etapa aguda dentro de las 24 h evidenciaron una notable mejoría de su déficit motor dentro de las 2 semanas de ictus, no se registraron lesiones crónicas a distancia diaquisis. Los pacientes con lesiones crónicas hasta 1 año mejoraron su déficit motor, no mejoraron su afasia pero cambio su nivel cognitivo.la resonancia por difusión nos permitió ganar horas al ictus y atacarlo intensivamente.

Combination Therapy of Concentrate of Growth Factors (CGF) and Ozone: Its application in diabetic ulcers and in aesthetic medicine.

[Terapia combinada de Concentrados de Factores de Crecimiento Ozonizados Autólogos (CGF) y Ozonoterapia: Su aplicación en úlceras diabéticas y Medicina estética.]

Adriana Schwartz Tapia.

Adriana Schwartz MD Directora Científica Clínica Fiorela, Madrid-España. Directora Científica, Instituto Clínico Fiorela, San Pedro Sula Honduras.
www.clinicafiorela.com Presidenta Aepromo www.aepromo.org e IMEOF www.imeof.org Autor para correspondencia: Adriana Schwartz, Clínica Fiorela, Av. Juan Andrés 60, Local 1 Bajo izda, CP 28035 Madrid, España. Adriana@clinicafiorela.com Adriana@aepromo.org

Esta presentación tiene la intención de exponer la tecnología avanzada relacionada con el uso clínico de la combinación de ozono, Concentrado de Factores de Crecimiento Ozonizados (CGF) y Células CD34+ autólogos en diferentes procedimientos que pertenecen al campo de la dermatología, medicina estética y medicina vascular. Los tratamientos que emplean los concentrados de factores de crecimiento (CGF) mimetizan los eventos que se suceden durante el proceso fisiológico de cicatrización debido a la liberación de diversos factores de crecimiento. Al ser autólogo, la seguridad del procedimiento es alta. El CGF es un concentrado de factores de crecimiento que incluye: el factor transformante beta (TGF- β), factor de crecimiento del endotelio vascular (VEGF) y el factor de crecimiento derivado de plaquetas (PDGF) entre otros.

Objetivo. El presente trabajo tiene como propósito demostrar el efecto bioestimulador, cicatrizante y reparador del ozono y los factores de crecimiento en el tratamiento de diversas patologías tales como: psoriasis, acné, rosácea, quemaduras, cicatrices, corrección de arrugas, bioestimulación facial. Al mismo tiempo demostrar el efecto cicatrizante y reparador del ozono y los factores de crecimiento en el tratamiento de úlceras en el pie diabético, así como evaluar la prevención de la amputación del mismo con el uso de la ozonoterapia en combinación con los factores de crecimiento.

Métodos. Se realizó un estudio prospectivo, mono-céntrico, no aleatorizado en el que participaron 15 pacientes en un intervalo de edades de 45 a 62 años con pie diabético y afectación grados II y III según la clasificación de Wagner durante los meses de septiembre a diciembre del 2012; todos ellos fueron atendidos de forma ambulatoria. Se les administró ozono sistémico a dosis terapéuticas de 1.0, 1.5, 2.0 y 2.5 mg, 2 veces por semana por vía sanguínea (autohemoterapia); perilesional e intralesional una vez por semana a 5 μ g/ml; en bota a concentraciones de 80, 50, 30 μ g/mL. Una vez obtenido y asegurado el flujo sanguíneo a las partes distales por disminución de la PO₂ venosa y aumento de la PO₂ arterial, como también de la asepsia en el lecho de la úlcera mediante cultivo, se aplicaron concentrados de factores de crecimiento, células CD34 y plasmagel una vez por semana. Las administraciones se mantuvieron hasta que se logró granulación completa, o se alcanzó un máximo de 18 semanas de tratamiento. A los 10 días de tratamiento se confirmó la formación de tejido de granulación. Al mismo tiempo se trataron pacientes con diversas patologías dermatológicas, tales como el acné, rosácea, cicatrices post-acné, quemaduras a las cuales se le infiltraron Células CD34, CGFO3 y se corrigieron los defectos con Plasma Gel.

RESULTADOS: La diabetes mellitus tipo 2 representó el 85,7 %. El género femenino predominó, 71,5 %. El 85,8 % estuvo representado por el pie diabético neuroinfeccioso y el 69,1 % perteneció al grado 2 y 3 de la clasificación de Wagner. Entre las 16-18 semanas de tratamiento el 93,2 % presentó epitelización total a la aplicación del ozono y CGFO3. **CONCLUSIÓN:** El presente estudio demostró al ozono en combinación con los concentrados de factores de crecimiento ozonizados como un método eficaz y seguro para acelerar la curación de las úlceras del pie diabético y prevenir la necesidad de amputación. Al mismo tiempo se constató la mejora de las cicatrices tratadas, el rejuvenecimiento y vitalización de la piel.

Arthrodiastasis and canalicular decompression, another effect of medical ozone

[Arthrodiastasis y descompresion canalicular, otro efecto del ozono medico]

Juan López-Laserna Ruiz

Chief of the Foot and Ankle Unit. San Juan de Dios Hospital. Cordoba.

Desde 1.999 empleamos con éxito el Ozono Medico mediante infiltración en patologías osteoarticulares por sus efectos antioxidante, antiinflamatorio, entre otros. La artrodiastasis con fijador externo se viene empleando en patologías de tobillo, rodilla, enfermedad de Perthes, etc. Sola o asociada a sinovectomia y limpieza artroscópica. La distracción articular es una técnica comúnmente utilizada por cirujanos europeos para el manejo de artrosis de tobillo. La literatura ortopédica europea proporciona ejemplos de resultados quirúrgicos que evidencian cómo este procedimiento aumenta el margen de movimiento y disminuye los síntomas de dolor al caminar

Los Síndromes canaliculares comprenden el conjunto de manifestaciones neurológicas que aparecen por la compresión de un nervio en un canal o desfiladero anatómico. La causa más común es la falta de adecuación entre el continente (canal o desfiladero) y el contenido (nervio). El termino descompresión abierta se emplea en el tratamiento de estos síndromes.

En este trabajo vamos a compartir nuestra experiencia en el tratamiento de las artrosis y de los síndromes canaliculares con infiltraciones con Ozono Medico, demostrando con imágenes el efecto artrodiastasis, sobre todo en articulaciones herméticas como el tobillo, la metatarso-falángica primera, la radio-humeral, entre otros. E igualmente el efecto de descompresión cerrada en los Síndromes canaliculares. Este efecto sumado al antiinflamatorio explica la mejoría de estas patologías

Caudal and Epidural Ozone Injections in Low Back Pain Cases

Ruhi Cakir

Mediozon Clinics, Semsettin Gunaltay Cad Beyaz Saray Apt No: 256 K: 1 Erenkoy Istanbul TURKEY Phone: +902163681645 Fax:+902163694727
dr.ruhicakir@mediozon.com

Direct ozone injection is widely used in pain management. Discal hernias, protrusion, facet joint pain problems mostly can be treated by direct ozone injections. But spinal stenosis cases usually and some of discal hernia cases do not benefit from those treatments. In conventional medicine corticosteroids and analgetic drugs are injected into sacral hiatus to treat the patients of that problem. In the same manner can medical ozone be injected to the same area that do not benefit from other conventional or ozone therapy injections.

OBJECTIVES: To assess the feasibility and safety of caudal epidural medical ozone injections.

METHODS: We studied 30 patients with low back pain and nerve root pain related to disk herniation or associated with lumbar spinal stenosis. A caudal epidural medical ozone injection was performed. Acceptability of the procedure by the patient was assessed. Adverse events occurring immediately after the procedure and within the first month were collected.

RESULTS: After 24 hours, pain relief was seen in all the patients except one. After 3 weeks, symptomatic improvement was seen in 97.5% of the cases, with good results in 65% and fair results in 32.5%. After 6 months, symptomatic improvement was seen in 67.5% of the cases with good results in 47.5% and fair results in 20% of the patients. No major complications were observed. It is concluded that caudally administered medical ozone injections are a safe and effective modality of treatment in lumbar spinal stenosis with good results in short term and possibly long term in some patients.

CONCLUSION: Sacral Hiatus Medical Ozone injection is a fast, easy-to-perform, well accepted procedure.

Ozone Sauna.Can we use it in medicine?

Saltuk Aytacoglu

Background: Aim of this work was to find out if it would worth to combine moist steam cabinet with ozone therapy technique.

Methods: Different hot steam bath modalities were resurged with ozone sauna applications mainly on cosmetics, premenstrual syndrome (PMS), obesity and pain to observe if ozone sauna would have an effect on the quality of life according to a verbal scale; "not good", "good", "very good". Ozone sauna was applied as a quasi-total-body exposure, 1lt/hour, 0.5 gr/hour ozone. The inside temperature was kept between 42- 45 °C. Duration was 20-35 minutes. Humidity was 100%.

Results: After 6 sessions, 2/week, the skins became like "silk" cosmetically. In PMS, change in the quality of life was good in 10/12 patients and very good in 2/12. 1/14 had no difference. 11/14 denoted good results and 2/14 denoted very good results in the pain group. All obesity group patients (9/9) had good results.

This small numbered observational study (no statistics) puts forward nominally the beneficial outcomes of the combination therapy of steam cabinet and ozone generator in above mentioned groups of patients according to a verbal scale in terms of increased quality of life, indicating to enhanced results that would not have been obtained by our modern medicinal applications. The oncologic patients are predicted to benefit from this concept as well.

Conclusion: My favorable personal experience with the combination of these two procedures inculcates investigations with oncologic patients with higher subject numbers will have a lot to add to this concept over time.

Adaptogenic theory of ozone therapy. Why as a result of exchange rate system procedures, ozone therapy normalize the biochemical and physiological characteristics of an organism?

Eugeni I. Nazarov

Asian-European Union of ozone therapists. Odessa.Ukraine. einazarov@hotmail.com

We know that the pharmacological activity of the ozone in its systemic administration has an homeostatic, normotrophic effect and it is a powerful organic modulator. It reduces the high biochemical values and raises the minors, this is what we call Homeostasis. The normotrophic effect of ozone is very effective, especially in the encephalic vascular blood flow, as the work of Dr Clavo demonstrated. It improves the speed of blood flow and its metabolism of the oxygen.

The ozone can induce an adaptation to oxidative stress or to a preconditioning oxidative state with controlled doses and with repetitive stimuli. Thus, it stimulates endogenous antioxidant mechanisms, preparing the host to face physiopathological conditions mediated by reactive oxidative species of oxygen (ROS). This work shows the positive dynamics of the psychosomatic condition of the patients after finishing several repetitive ozonotherapy cycles. The organism is revitalized and reduces its processes of aging caused by the proper processes of oxidation of the organism.

We developed, based on the adaptogenic hypothesis of the ozone a software program specially designed to measure the efficacy and the impact of repetitive cycles of ozonotherapy (every 4-5 months) in the organism, monitoring markers such as the estimated age of the patient according to psychological tests, counts of leukocytes and hormonal markers that behave in different form under the systemic influence of the ozone.

My sincere thanks to prof. C.N.Kontorschicova, prof. Nabil Mawsouf, prof.Nurettin Lulechi, Dr. Ruchi Cakir, Dr.Veronika Vongai and Dr Adriana Schwartz for helpful comments and discussions.

Conferencia Plenaria

Teoría del efecto adaptogénico del ozono sistémico. ¿Porqué el ozono normaliza parámetros bioquímicos y fisiológicos?

Eugeni I. Nazarov

Asian-European Union of ozone therapists. Odessa.Ukraine. einazarov@hotmail.com

Sabemos que la actividad farmacológica del ozono en su administración sistémica tiene un efecto homeostático, normotrófico y modulador orgánico potente. Los valores bioquímicos altos los reduce y los menores los eleva, es lo que llamamos Homeostasis. El efecto normotrófico del ozono es muy eficaz, especialmente en el flujo sanguíneo vascular encefálico, como lo demuestra el trabajo del Dr Clavo. Mejora la velocidad de flujo sanguíneo y su metabolismo del oxígeno.

El ozono puede inducir una adaptación al estrés oxidativo o a un preconditionamiento oxidativo a dosis controladas con estímulos repetitivos. De esta forma estimula mecanismos antioxidantes endógenos, preparando al huésped a enfrentar condiciones fisiopatológicas mediadas por especies reactivas del oxígeno. Este trabajo muestra la dinámica positiva de la condición psicosomática de los pacientes después de finalizar varios ciclos de ozonoterapia. El organismo se revitaliza y reduce los procesos de envejecimiento causados por los procesos de oxidación propios del organismo.

Se desarrolló, basado en la hipótesis adaptogénica del ozono un programa software, especialmente diseñado para medir la eficacia e impacto de ciclos repetitivos de ozonoterapia (cada 4-5 meses) en el organismo, monotorizando marcadores tales como la edad estimada del paciente según pruebas psicológicas, conteos de leucocitos y marcadores hormonales que se comportan de forma diferente bajo la influencia sistémica del ozono.

Mis sinceros agradecimientos a la profesora C.N.Kontorschicova, Dr. Nabil Mawsouf, Dr. Nurettin Lulechi, Dr. Ruchi Cakir, Dr.Veronika Vongai and Dr Adriana Schwartz por sus valiosas aportaciones.

Why ozone therapy in multiple sclerosis?

Vicenzo Simonetti, William Liboni, Filippo Molinari

E.mail: v.simonetti@tiscali.it

Multiple sclerosis (MS) is a disease characterized by chronic inflammation and selective destruction of myelin in the central nervous system. The multifocal scarring typical of this disease are called plaques. It should be emphasized that the most obvious results were obtained in patients with relapsing-remitting MS, and were more nuanced in those suffering from a progressive primary / secondary, characterized by chronicity of symptoms and relief of major changes in the brain parenchyma and medullary. This improvement is manifested clinically by a recovery more or less evident depending on the severity, depending, that is, if the inflammatory lesion is still confined to the white matter or gray matter interest already, and chronicity of the disease state reached.

The clinical observations of patients treated enable us to state that the current tables of disability (FIM Ashwort ...) do not provide for the gradual enough to highlight the benefits of ozone, which also appear to significantly improve the quality of life of patients. Our clinical results are consistent with the proposed objectives.

The Ozone, because of its actions referred to above, is a valid therapy for the pathophysiological changes and symptoms in the MS where it can make a significant improvement in the quality and expectancy of life, with no side effects and low cost therapeutic intervention. We believe that his association with the commonly used treatment protocols may improve clinical outcomes with a lower incidence of side effects. In addition, ozone therapy could represent a real therapeutic alternative for patients who can not be subjected to traditional drug treatment.

Cardioprotective effects of ozone oxidative preconditioning in an in vivo model of ischemia/reperfusion injury

L. A. Ahmed, PhD*; H.A Salem, PhD*; Nabil Mawsouf **; A. S. Attia, PhD*; A.M. Agha*, PhD

Faculty of Pharmacy, Cairo University*, National Cancer Institute, Cairo University **

This study was designed to investigate the cardioprotective effects of ozone oxidative preconditioning in myocardial ischemia/reperfusion (I/R)-induced hemodynamic, biochemical and histological changes in rats. Rats were randomly assigned into 5 groups. Groups 1 and 2 were normal and I/R groups, respectively. The other groups received rectal insufflations either ozone (0.3 mg/kg/day in 1st week followed by 0.5 mg/kg/day in 2nd week) or ozone (0.6 mg/kg/day in 1st week followed by 1 mg/kg/day in 2nd week). The last group received oxygen vehicle. Rats were then subjected to myocardial I/R (40min/10min). Heart rates and ventricular arrhythmias were recorded during I/R progress. At the end of reperfusion, plasma creatine kinase-MB (CK-MB) and total nitrate/nitrite (NO_x) were determined. In addition, lactate, adenine nucleotides, thiobarbituric acid reactive substances (TBARS), reduced glutathione (GSH) and myeloperoxidase (MPO) activity were estimated in the left ventricle of heart. Finally, histological examination was performed to visualize the protective cellular effects of ozone oxidative preconditioning. Only higher ozone therapy showed little protective effect against ventricular arrhythmias and was able to counteract the state of oxidative stress and normalize elevated MPO activity and plasma NO_x. Moreover, higher ozone therapy was more effective in attenuating CK-MB release, lactate accumulation and improving energy production. It seems that both doses of ozone therapy were equally protective against cell membrane damage. However, higher ozone therapy was better in improvement of intracellular acidosis, energy production, oxidative stress, leukocytic infiltration. Histological examination revealed also better improvement by higher dose of ozone therapy.

Success story of ozonucleolysis in disc lesions in Pakistan

Umair Rashid Chaudhry, M Farooq, Shahzad Karim and Abdul Hameed

Department of Interventional Neuroradiology, Lahore General Hospital Lahore, Pakistan.

BACKGROUND AND PURPOSE: Direct injection of Oxygen-Ozone in to the discs has proved to be the effective alternative for surgery in patients with disc herniation in many countries around the world. We report our experience with ozonucleolysis with patients effected by lower backache, sciatica and pain cervical region (Brachalgia) due to disc herniation including post operative recurrence or disc prolapse.

MATERIAL &METHODS:ElevenThousand &Two Hundred patients were treated with single two multiple sessions of Oxygen Ozone therapy. All the patients had CT or MRI evidence of annulus tear/ disc prolapse with clinical signs of nerve root compression. The procedure was performed under angio fluoroscopy using 22/23 G spinal needle without any form of anesthesia. All the patients received intra discal injection of Oxygen Ozone mixture with and without periganglionic infiltration at an ozone concentration 30 Ugm/ml. Among these patients7000 were males and 4200 were females between the age of 20-80 years. Therapeutic outcome was assessed 5 months after treatment by using modified MacNab method.

RESULTS: A satisfactory therapeutic outcome was obtained. 55% of the patients showed complete recovery with resolution of symptoms. 20% of the patients complained of occasional episodic pain and with no limitation of occupational activity. 15% of cases showed insufficient improvement. 5% of cases had insufficient improvement and went for surgery. 10% of cases never turned up after the first visit.

CONCLUSION: Intradiscal with and without periganglionic injection of Ozone for herniated discs has revolutionized percutaneous approach to nerve root diseases making it safer, cheaper and easier to repeat than treatments currently use in Pakistan.

A substitute of the Fluor. The protective ozone in the oral cavity

Nora Bazzano

Odontóloga. IAOHD, AMAOO

Fluoride is added to the water supply of most American cities and many others countries, for the ostensible purpose of dental hygiene and remineralization. But we was be amazed to find out that such a thing is not only unlikely, but actually the reverse of the ongoing reality. Those countries have been fluoridating drinking water for so many decades that we hardly think about it. they don't have better dental health. Very few articles appear about fluoridation in newspapers and magazines anymore. The reason: that fluor is not good for what we are using. Suddenly, researchers, found out that fluoride was not safe at all, but was worse, they found out that fluoride doesn't stop tooth decay at all and causes teeth to rot and crumble, and the excess ,by the same mechanism also causes osteoporosis, cancer and damage to the pineal gland.

We need to found other way to have healthy teeth and bone, for our patients. The concept of dental caries has changed in the last decade. Investigations into the deepest molecular processes have disclosed the exquisite mechanism of physiological demineralisation and remineralisation that takes place daily in oral hard tissues. Decay starts as a metabolic imbalance, shifted towards acidity and demineralisation. Dental plaque is the medium in which this process develops. In such an environment acidophilic and acidogenic bacteria develop this 'ecological niche' and new methods to stop caries.

Ozone has the effect, through its powerful oxidizing properties, of not only removing the protein protection and being bactericidal, but also oxidizing the biomolecules that allow the niche to survive and expand. This has a severely disruptive effect on the bacterial population in the carious lesion and obliterates the cariogenic bacteria and their ecological niche, thereby swinging the equilibrium in favors of re-mineralisation. No more acid can be produced within the lesion when the acid-producing bacteria are eliminated. The precision of treatment consists in the high oxidative action on substrates and bacteria; realism of treatment is supported by the very rapid kinetics of ozone oxidative reactions, and by the long lasting effects of remineralisation, the ozone therapy has potentially a major part to play in the prevention and treatment of dental caries.

What is the reason to use toxics products like fluor if we have a non invasive ozone treatment for oral and dental pathologies? Ozone has been shown to be safe and clinically to be effective in the management of caries and other oral pathologies.

Conferencia Plenaria

Un sustituto del Flúor. El Ozono protector de la cavidad oral

Nora Bazzano

Odontóloga. IAOHD, AMAOO

El fluoruro se agrega al suministro de agua en la mayoría de ciudades de Estados Unidos y muchos otros países, con el propósito ostensible de higiene y remineralización dental. Pero nos sorprendimos al descubrir que eso no ocurre sino todo lo contrario. Esos países que han fluorado el agua potable durante tantas décadas, y lo pensamos fehacientemente, no han mejorado la salud dental. Llama la atención que son muy pocos los artículos que aparecen sobre la fluoración en los periódicos y revistas, actualmente: La razón " el flúor no es bueno para lo que estamos utilizando "...

Los investigadores descubrieron que el fluoruro no era seguro en absoluto, pero era aun peor, se enteraron de que el flúor no detiene la caries dental en absoluto y hace que los dientes se deterioren y se destruyan, y por el mismo mecanismo también causa osteoporosis y como si fuera poco el exceso produce algún tipo de cáncer y daño en la glándula Pineal. Necesitamos encontrado otra manera de tener dientes y huesos, sanos en nuestros pacientes.

El concepto de la caries dental ha cambiado en la última década. Las investigaciones sobre los procesos moleculares más profundos han revelado el delicado mecanismo de desmineralización fisiológica y remineralización que tiene lugar todos los días en los tejidos duros orales. La caries comienza como un desequilibrio metabólico, el medio interno se desplazó hacia la acidez y eso lleva a la desmineralización. La placa dental (biofilm) es el medio en el que se desarrolla este proceso y es acidófilo como el medio ambiente y las bacterias acidogénicas construyen su "nicho ecológico" por destrucción de calcio y fosforo del esmalte. Los nuevos métodos para detener la caries, tienen que ser encontrados en una etapa temprana en el desarrollo de una lesión de caries.

El ozono tiene el poder a través de sus potentes propiedades oxidantes, no sólo de neutralizar la acidez y de ser bactericida, pero también oxidar las biomoléculas del nicho y este no puede sobrevivir ni expandirse. Y se reinicia la remineralización. No más ácido se puede producir dentro de la lesión cuando se eliminan las bacterias productoras de ácido. La muy rápida cinética de las reacciones oxidativas del ozono, y los efectos prolongados de la remineralización diaria tiene potencialmente un papel importante en la prevención y el tratamiento de la caries dental.

¿Cuál es la razón para utilizar productos tóxicos como el fluor, si tenemos un tratamiento no invasivo de ozono para las patologías orales y dentales? El ozono ha demostrado ser seguro y clínicamente eficaz en el tratamiento de la caries y otras patologías orales.

Clinical Applications of Ozone in the Dental Clinic, a USA perspective

Mark T Weiser

Odontologo DDS. IAOH. 330 San Ysidro Road. Santa Barbara, Ca, USA 93108.

Background: Ozone has a number of biological effects, such as bactericidal, fungicidal and kills viruses. It also improves blood circulation, increases capacity of oxygen absorption in the erythrocytes, and activates the antioxidant defense systems. Ozone has healing, disinfecting and or sterilizing, properties as well.

Methods: This oral presentation will show us the dental uses of ozone, from oral hygiene, to implant and bone healing, from periodontal disease therapy to tooth whitening, its uses in endodontic treatment and tooth remineralization and desensitization. Ozone has an important role in the clinical management of disease, infection control and wound management, with implications for the rest of the human body. Dr Weiser will also show the various ozone equipment available in the USA and ancillary products used to support optimal healing.

Results: A review of the literature shows the effective and predictable eradication of infectious organisms when exposed to ozone. Dr Weiser will show you the various applications of ozone in the dental clinic using the different forms, gas, oil, and water. In dental care, this has resulted in the stopping the progression of periodontal disease, effective bacteria kill for endodontics, and changing the biochemistry of tooth structure which results in remineralization and many times desensitization. Some studies have shown effective infection control and wound healing, using ozone. This can lead to decreased time in the dental chair, reduced post operative pain and possible reduced cost of medications needed.

Conclusions: Ozone has certainly played a significant role either primary or secondarily in stopping dental disease and creating an environment for optimal healing. The various forms of ozone used each play a role in treatment in the dental opertory. Dr Weiser will show what equipment and delivery systems people in the USA are using and protocols for use, and will show how incorporating this technology into everyday procedures can produce excellent results making treatment outcomes more predictable.

Plant-derived products in the treatment of HIV; a novel approach to treating this disease

Julian Holmes

E.mail: drjulianholmes@gmail.com 5 Little Kimble, Cnr Marie & Avenue Streets, Newlands 7700, Cape Town, WP.

HIV has been intensively studied in Sub-Sahara Africa due to its high infection rate, the inability to find a pharmaceutical 'cure', and the high morbidity and mortality associated with this disease. HIV is a viral infection that has no boundaries; it affects all ages, economic status, races and is found throughout the world. This disease has spread to every country in the world and in some of those, infection rates exceed 20%. Some agricultural-based communities have lost two or more generations of subsistence farmers, leaving communities totally dependent on outside food and financial aid. A number of pharmaceutical treatment modalities and nutritional support programmes have been developed since the 1980's but to date, no simple or low-cost treatment options are available. In two previous studies, a statistically significant change in the viral loading and CD4 cell count was noted within 30-days with plant-derived products including ozonated plant oils.

Methods: 40 subjects were enrolled into a privately-funded clinical trial in Western Cape, South Africa. Suitable subjects were counselled and consent obtained. No financial inducement was offered. Each subject was provided with products 'V-221' (containing 1,2,4-trioxolanes) and 'SO-270' (containing whole-plant product), syringes, remanolation tips, and instructions. Each subject was reviewed at 15 and 30 days. Viral loading, T-Cell and CD4 cell counts were established at the trial start and completion.

Results: 2 subjects failed to return. No unwanted side effects were reported or noted. The results show a significant difference at the $p=0.1$ level of both viral loading and CD4 cell count after 30 days treatment. A synergistic effect of 'V-221' and 'SO-270' was observed, with an increased reduction of viral loading and increased T-Cell and CD4 cell counts ($p=0.1$ level) when compared to previous studies.

Conclusions: This study reported a statistically significant reduction in the viral loading and elevated T-Cell & CD4 cell counts in this 30-day trial, and a synergistic effect of two novel products containing plant-derived extracts. These products can be grown in South Africa & support local agricultural communities; the products are cost effective, support the body's own immune system and the delivery system is well tolerated. Further research is needed to establish the pharmacokinetics of the extracts used.

Advances in dentistry and ozone therapy, effect of gaseous ozone in *Enterococcus faecalis* biofilms, in vitro study

Viviana Clelia Lüdi Etchevarren; Pérez Estevez, Antonio; Seoane Prado, Rafael; Ruiz Piñón, Manuel; Ledesma Lüdi Yanina; Pérez Olmedo, Juan Carlos.

Lüdi Etchevarren, Viviana Clelia, Tutora Clínica de Patología y Terapéutica Dental II de la USC¹; Pérez Estevez, Antonio, técnico de investigación, Departamento de microbiología de la USC; Seoane Prado, Rafael, Catedrático del Departamento de Microbiología USC; Ruiz Piñón, Manuel, Profesor asociado de Patología y Terapéutica Dental II de la USC; Ledesma Lüdi Yanina, Tutora Clínica de la Unidad de Cirugía de la USC; Pérez Olmedo, Juan Carlos, Ozonoterapeuta licenciado en Medicina y Cirugía. Clínica Dental Socorro, Avda. Gutierrez Mellado 11-4º-A, Pontevedra, España, Tel. 0034-986-855489, vivianaludi@hotmail.com

The aim of our study was to evaluate the bactericidal capacity of the gas ozone against *Enterococcus faecalis* biofilm. Biofilms were generated in vitro in 0.5 mL eppendorf tubes from a 50mL culture of *Enterococcus faecalis* in Brainheart Infusion (0.5 Mc Farland) grown aerobically at 37 ° C for 7 days. 4 positive controls and 11 treated with 20 mL of ozone gas (20 µg / mL) for 60 s: 15 samples were made. Then the viability of biofilm bacteria by the counting method was tested CFUs. Ozone gas was inflated with a utility model in a micro perforated needle (developed and patented by us) that exploits the ozone physicochemical properties especially for dentistry, as a producer of ozone gas appliances intended for human medicine was used. As a result a strong decrease in the number of viable cells from biofilms treated with ozone gas compared with untreated control biofilms was observed. According to the Fisher F test the differences were statistically significant ($p < 0.01$).

The literature emphasizes that the bactericidal effectiveness of ozone is very dependent on the ozone concentration and mode of application of gas. The present study demonstrates the effectiveness of a method that uses a computer to get a higher concentration of ozone, compared to systems that use ambient oxygen normally used in dentistry and a system output versus the standard needle micro perforated single output system apical.

Avances en odontología y ozonoterapia, efecto del ozono gaseoso en biopelículas de enterococcus faecalis, estudio in vitro

Viviana Clelia Lüdi Etchevarren; Pérez Estevez, Antonio; Seoane Prado, Rafael; Ruiz Piñón, Manuel; Ledesma Lüdi Yanina; Pérez Olmedo, Juan Carlos.

Lüdi Etchevarren, Viviana Clelia, Tutora Clínica de Patología y Terapéutica Dental II de la USC¹; Pérez Estevez, Antonio, técnico de investigación, Departamento de microbiología de la USC; Seoane Prado, Rafael, Catedrático del Departamento de Microbiología USC; Ruiz Piñón, Manuel, Profesor asociado de Patología y Terapéutica Dental II de la USC; Ledesma Lüdi Yanina, Tutora Clínica de la Unidad de Cirugía de la USC; Pérez Olmedo, Juan Carlos, Ozonoterapeuta licenciado en Medicina y Cirugía. Clínica Dental Socorro, Avda. Gutierrez Mellado 11-4º-A, Pontevedra, España, Tel. 0034-986-855489, vivianaludi@hotmail.com

El objetivo de nuestro estudio fue valorar la capacidad bactericida del ozono gas frente a biopelículas de *Enterococcus faecalis*. Las biopelículas se generaron *in vitro* en tubos eppendorf de 0.5mL a partir de 50µL de un cultivo de *Enterococcus faecalis* en BrainHeart Infusion (0.5 Mc Farland), crecidos aeróbicamente a 37°C durante 7 días. Se hicieron 15 muestras: 4 controles positivos y 11 tratadas con 20 mL de ozono gas (20 µg/mL) durante 60 s. A continuación se comprobó la viabilidad de las bacterias de las biopelículas por el método de conteo de CFUs. El ozono gas fue insuflado con un modelo de utilidad de una aguja microperforada (desarrollada y patentada por nosotros) que aprovecha las propiedades físico-químicas del ozono especialmente para odontología; como productor de ozono gas se utilizó aparatología destinada a medicina humana.

Como resultado se observó una fuerte disminución del número de células viables procedentes de las biopelículas tratadas con ozono comparadas con las biopelículas control no tratadas. Según la prueba F de Fisher las diferencias encontradas resultaron ser estadísticamente significativas ($p < 0.01$).

La bibliografía destaca que la efectividad bactericida del ozono es muy dependiente de la concentración de ozono y del modo de aplicación del gas. El presente estudio demuestra la eficacia de un método que utiliza un equipo que consigue una concentración superior de ozono, frente a los sistemas de aprovechamiento del oxígeno ambiental normalmente utilizados en odontología, y un sistema de salida de aguja multiperforada frente al habitual sistema de salida única apical.

The therapeutic value of ozonotherapy

Velio Bocci, Ph.D.

Department of Physiology at the University of Siena, Italy

The biochemical, immunological, molecular and pharmacological mechanisms of action of ozone, when at the appropriate very low concentrations, has dissolved in the water of human plasma, have been fully clarified. Ozone acts simply as a pro-drug because, after dissolving very rapidly into the plasma water (49 ml per 100 ml of water at 20°C), owing to its very high reactivity (oxidation potential: 2.07 V), just before the infusion of the ozonated blood into the donor patient, totally disappears after having generated two crucial mediators: H₂O₂ and two molecules of alkenals. These are the mediators able to firstly stimulate several biochemical reactions on blood cells and then on a great numbers of body cells.

This stimulation is essential for explaining the therapeutic activity of ozonotherapy. This is due to the upregulation of synthesis and release of a variety of crucial antioxidants and phase-2 proteins, which can reverse the chronic oxidative stress aggravating several chronic diseases. These are: the chronic limb ischemia, the AR-macular degeneration, the COPD, the diabetes type-II and possibly chronic nephropaties and even multiple sclerosis. Small clinical trials have already clarified that ozonotherapy, used as an integrative treatment of orthodox drugs can re-establish a correct redox system markedly improving the patient prognosis.

The conclusion is that ozonotherapy is able to induce healing via the body cell response to a mild oxidative stress primarily caused by well-tolerated low ozone dosages

The Nuclear factor, Nrf2 is a master transcription factor that regulates EpRE or antioxidant response element (ARE) or human antioxidant response element (hARE) in human, mediated expression genes encoding antioxidant enzymes and cytoprotective proteins to cellular stresses. These Nrf2-regulated genes can be classified into phase II xenobiotic-metabolizing enzymes antioxidants, molecular chaperones, DNA repair enzymes, and anti-inflammatory response proteins, thereby reducing reactive compounds such as electrophiles and free radicals to less toxic intermediates whilst increasing the ability of the cell to repair any damage ensued. Importantly, Nrf2 has been shown to possess an EpRE sequence within its own promoter region providing a platform for Nrf2 to initiate its own transcription further enhancing the adaptive cell defense response.

Recent studies suggest that the sequence context of the EpRE, the nature of the chemical inducers, and the cell type are important for determining the activity of the enhancer in a particular gene. The evidence of the EpRE pathway was observed also for some xenobiotics modulating the regulation of Phase I and Phase II drug-metabolizing enzymes. Nrf2 is a powerful protein located within each cell in the body and it is activated by an Nrf2 activator. Once released it migrates into the cell nucleus and bonds to the DNA at the location of the EpRE which is the master regulator of the entire antioxidant system located in all human cells. We know that excessive free radicals induce better antioxidant production through this pathway, but the question is: ozone also does? It seems that *ex vivo* it does. However what does occur *in vivo* in the patient's blood? Is ozone able to induce and trigger throughout Nrf2 the production of thousands of antioxidant molecules, providing far better protection against the brain and total body damaging effects from free radicals?

The regulation of oxidative stress in the ozone therapy. Comparison with other therapies and frequent situations

Manuel Gómez Moraleda

Medozono S.L. C/Manuel Moreno, 61, 08339 Vilassar de Dalt, Barcelona, Spain. <http://www.medozono.com>. Tel: +34 937507331, E.mail: mgomez@naturozone.com

Some of the main mechanisms and biological phenomena related to the generation of oxidative stress in humans are exposed. Also the relative intensity of these phenomena and some of the most important mechanisms of antioxidant response are discussed.

Results of oxidative stress measurements published by different authors, referring to different types of populations and subpopulations are presented. These results are discussed and compared to each other.

Results of a comprehensive analysis of data from numerous studies published in the international literature on oxidative stress in subpopulations that develop or are exposed to different activities and/or suffering from different diseases, and their antioxidant reaction under these conditions are exposed.

It is shown the effect on oxidative stress and antioxidant response of biological systems to the application of different oxygenating therapies protocols. These are compared with the results of the of ozone therapy treatments.

It is concluded that ozone therapy is much more beneficial and safer than other procedures.

Conferencia Plenaria

La regulación del estrés oxidativo en la ozonoterapia. Comparación con otras terapias y situaciones frecuentes

Manuel Gómez Moraleda

Medozono S.L. C/Manuel Moreno, 61, 08339 Vilassar de Dalt, Barcelona, Spain. <http://www.medozono.com>. Tel: +34 937507331, E.mail: mgomez@naturozone.com

Se exponen algunos de los mecanismos y fenómenos biológicos principales relacionados con la generación de estrés oxidativo en humanos. También se discute la intensidad relativa de estos fenómenos y la de algunos de los más importantes mecanismos de respuesta antioxidante.

Se presentan resultados sobre las mediciones de estrés oxidativo publicadas por diferentes autores, referidas a diferentes tipos de poblaciones y subpoblaciones. Estos resultados se comentan y comparan entre ellos.

Se exponen resultados de un amplio análisis sobre los datos de numerosos trabajos publicados en la literatura internacional, acerca del estrés oxidativo en subpoblaciones que desarrollan o están expuestas a diferentes actividades y/o que padecen de diferentes patologías, y su reacción antioxidante en estas condiciones.

Se muestra el efecto sobre el estrés oxidativo y la respuesta biológica de los sistemas antioxidantes frente a la aplicación de diferentes protocolos de terapias oxigenantes. Estos se comparan con los resultados de los tratamientos de ozonoterapia.

Se concluye que la ozonoterapia resulta mucho más beneficiosa y segura que otros procedimientos.

Treatment of lumbar disc herniation with ozone-oxygen guided by tomography

Iván Pacheco (VEN)

Head of the trauma unit and ozone therapy of Porlamar, Margarita Island, Venezuela. Treasurer of the Venezuelan society of ozone therapy. Orthopedist.

Objective: This prospective study is to demonstrate that the percutaneous nucleolysis with oxygen - ozone is effective, and very safe for treatment of hernias of the lower lumbar segment that cause discogenic pain.

Materials and Methods : Prospective study of 85 patients with symptomatic lumbar disc herniation to whom there were performed a total of 85 percutaneous nucleolysis paraforaminal with O₂ -O₃ from June 2011 to June 2013, all nucleolysis were performed under control of tomographic guide, strict measures of asepsis and antisepsis, conscious sedation. All patients were administered O₂ -O₃ paraforaminal 20ug (5-10 ml) plus procaine at 2% and 1cc 40mg of steroidal crystals, all cases were administered 1GS of cefacidal as prophylaxis. The effectiveness of treatment is based on pain control by baseline visual analog scale (EVA 0) , at 6 (EVA 1) , at 12 (EVA 3) and 24 months (EVA 6) and by the nucleolysis oswestry scale assessed before treatment and at the end of it. All patients were survey conducted at the first visit and after the end of treatment with satisfactory response.

Results: 85 percutaneous lumbar nucleolysis 85 patients were performed initial Eva was 7.78 + 0.99 and the evolution at 6, 12 months and 24 months was: 2.43 + 2, 19, 1.80 + 2.31 and 2.07 + 2.49. The initial rate of mild oswestry disability: 10%, moderate disability: 30%, severe disability: 58%, very severe disability: 2%. After mild disability was 1%, moderate disability: 6%, severe disability: 10%,very severe disability: 0% with a statistically significant reduction in all three cuts. None of the patients had adverse effects, in terms of satisfaction expressed by patients 61 for excellent (72%), 18 for good (21%), 6 regular for (7%).

Conclusions: Percutaneous nucleolysis with oxygen-ozone is safe and highly effective in the treatment of lumbar disc herniation pain by technique with discogenic pain.

Key: PL24 ENG

Type of Presentation: Oral Presentation.

Conferencia Plenaria

Tratamiento de hernias discal lumbar con oxígeno-ozono guiada con tomografía

Iván Pacheco (VEN)

Jefe de la unidad de traumatología y ozonoterapia Porlamar isla de margarita - Venezuela. Tesorero de la sociedad venezolana de ozonoterapia. Traumatólogo ortopedista.

Objetivo: este estudio prospectivo es demostrar que la nucleolisis percutánea con oxígeno-ozono es efectiva, muy segura; para tratamiento de hernias del segmento lumbar bajo que son causa de dolor discogenico.

Materiales y métodos: Estudio prospectivo 85 pacientes, con hernia discal lumbar sintomática a los que se realizo un total de 85 nucleolisis percutánea paraforaminal con O2-O3 durante un periodo comprendido entre junio 2011 a junio del 2013 todas las nucleolisis se realizaron bajo control de guía tomografica con medidas de asepsia y antisepsia estrictas, sedación consciente. Todos los pacientes se administro O2-O3 paraforaminal 20ug (5-10 ml) mas procaina al 2% mas 1cc de 40mg de cristales esteroideos, en todos los casos se administro 1gs de cefacial como profilaxis. La eficacia del tratamiento se basa en el control del dolor según la escala visual analógica basal (EVA 0), a los 6 (EVA 1), a los 12(EVA 3) y los 24 meses (EVA 6) de las nucleolisis y mediante la escala de oswestry evaluado antes del tratamiento y al final del estudio. Todos los pacientes se les realizo encuesta en la primera consulta y luego del final del tratamiento con respuesta satisfactoria.

Resultados: Se realizaron 85 nucleolisis percutánea lumbar 85 pacientes la Eva inicial fue de $7,78 \pm 0,99$ y la evolución a los 6, a los 12 meses y a los 24 meses fue: $2,43 \pm 2,19$, $1,80 \pm 2,31$ y $2,07 \pm 2,49$. El índice de oswestry inicial incapacidad leve: 10%, incapacidad moderada: 30%, incapacidad grave: 58%, incapacidad muy grave: 2%. Después fue de Incapacidad leve: 1%, incapacidad moderada: 6%, incapacidad grave: 10%, incapacidad muy grave: 0% con una reducción estadísticamente significativa a los tres cortes. Ningún paciente presento efectos adversos en cuanto a la satisfacción expresada por los pacientes excelente para 61 (72%), bueno para 18(21%) y regular 6(7%).

Conclusiones: la nucleolisis percutánea con oxígeno-ozono es una técnica efectiva, eficaz y muy segura en el tratamiento de dolor lumbar por hernia discal con dolor discogenico.

Plenary lecture

Bioenergetics optimization as a key mechanism of ozone therapy effects at urgent pathology

Sergey Peretyagin, Soloveva A.G., Martusevich A.K., Peretyagin P.V., Bitkina O.A.

Nizhny Novgorod Institute of Traumatology and Orthopaedics, State medical Academy.

Introduction. Hypoxia is associated with any urgent conditions obligatory leads to tissue energy deficiency. This pathological process is most early mechanism («trigger») of membrane damaging action in different organs. Metabolic acidosis, accumulation of non-fully oxidized substrates and nucleotides induce more strong processes of membrane damage (phospholipolysis, alternative ways of arachidonic acid metabolism, lipid peroxidation etc.). In this case ozone use supports activation of enzymatic reactions, replenishment of antioxidant reserves and pool of substrates for energy metabolism. The *aim of this work* is the justification of use of additional energy substrates in correction of hypoxic disorders by reactive oxygen species.

Materials and methods. We used two models of hypoxic condition (hemorrhagic shock in 86 dogs and deep thermal burn in 36 Wistar rats). In early postreanimational period animals of control groups were treated with standard algorithm. Animals of second groups get ozone therapy, and third ones are managed with combination «ozone + energy substrates (Microhydrine as an electron donor and Cytoflavin as succinic-containing drug)». In all animals we estimated oxidoreductases activity, parameters of energy metabolism, acid-base balance, heart functional state, microcirculation level and regulatory mechanisms, morphology of main organs.

Results. It was fixed, that in early postreanimational period (after hemorrhagic shock) the single ozone processing by 2.5 volumes of total circulating blood lead to stimulation of enzymes activity in blood and tissues (for example, lactate dehydrogenase, succinate dehydrogenase in myocardium tissue). It causes elevation of energy accumulation substances (AMP, ADP, ATP) and formed the optimal conditions for heart contractility, increasing of its output, energy and power in comparison with control group. Stimulation of energy production by ozone is confirmed with analysis of tissues morphology (mitochondrial polymorphism, ribosomal apparatus activation). More prolonged and effective action of systemic ozone therapy on energy production mechanisms was observed at treatment of burned rats. These animals got ozonized saline infusions every day, ozone-containing liniments and energy substrates (microhydrine, succinic acid). This algorithm caused intensity of lipid peroxydation at 2.4 times in 10 days after burn, antioxidant potential was elevated in 2.8 times in this case. In control group level of antioxidant activity and lipid peroxydation were lesser at 25-30% to main group. Dynamics of oxidoreductases activity in blood and tissues was similar. Benefits of ozone therapy in combination with energy substrates are supported by microcirculatory data.

Conclusion. It was stated, that at urgent pathology ozone-induced intensification of energy production must be associated with use of energy substrates. It stimulates restoration of functional, metabolic and morphological state of animals with thermal trauma or hemorrhagic shock.

Oxygen ozone therapy as integrated treatment of chronic obstructive pulmonary disease: a preliminary study

Emma Borelli, Velio Bocci,

Department of Medical Biotechnologies and °Department of Biotechnologies, Chemistry and Pharmacy, University of Siena, Siena, Italy

In this study we suggest the efficacy of major ozonated autohaemotherapy (OAHT) in patients affected by chronic obstructive pulmonary disease (COPD). 30 patients affected by moderate/ severe COPD were enrolled in two groups: group A (15 patients) underwent a cycle of OAHT associated with a standard therapy with inhaled beta2 long acting bronchodilators and/or corticosteroids twice a week for the first 5 weeks, thereafter a single treatment every week for other 10 weeks. Group B (15 patients) served as control and not received treatments otherwise the standard therapy. In all patients we measured before and after the end of the study: 1) Pulmonary FunctionTest 2) Resting Arterial blood gas 3) exercise tolerance by 6 min walking test (6MWT) 4) dyspnea index by Borg dyspnea scale 5) health status, evaluate by the St. George Respiratory questionnaire (SGRQ). Major ozonated autohaemotherapy was carried with an O3 concentration of 20 micrograms/ml for the first four treatments, thereafter the concentration of ozone was 40 micrograms/mL of gas for the other 16 treatments. In the group A there was a significant increase in 6MWT (417.5 +/- 107.4 m before the study vs 493.8 +/- 106 m at the end of study, p< 0.01) and a significant decrease in the degree of dyspnea measured by borg scale after the 6MWT (4.1 +/- 2.4 vs 3 +/- 2.1, p<0.01) and in SGRQ activity impact and total scores. In the COPD patients OAHT produces significant improvement in patient's quality of life and exercise tolerance. The integration of standard therapy with ozonotherapy in COPD can represent a novel and effective approach.

Does ozone have effect in rectal insufflation application in the estrone metabolism in postmenopausal women and in women with mammary neoplasia - both pre and post menopausal - positive hormone receptors?

[¿Tiene efecto del O₂/3 en aplicación por insuflación rectal en el metabolismo de las estronas (2-OHE y 16 α -OHE) en mujeres postmenopausicas y en mujeres afectadas de neoplasia mamaria – tanto pre como postmenopásicas – hormonoreceptoras positivas?]

Santos Martín

Clinica Dr Santos

La evaluación de las estronas en orina, procedentes del metabolismo estrogénico, nos permite conocer el resultado final del mismo medido en los parámetros de 2-OHE y 16 α -OHE. La vía del 2-OHE se supone protectora de la acción proliferativa a la cual induce la 16 α -OHE. Por ello, procesos que ayuden a desviar la vía metabólica hacia el 2-OHE sería deseable. Puesto que los procesos del metabolismo de los estrógenos están ligados a procesos oxidativos, se quiere comprobar en estudio "Proof of Concept" (PoC) si la aplicación rectal de O₂/3 modifica dicho cociente de las estronas en orina tanto en mujeres postmenopásicas como en mujeres afectadas por cáncer de mama estrógenodependientes. El periodo calculado del estudio será de 8 semanas por cada ensayo con aplicación bisemanal de O₂/3 vía rectal estudiando los cocientes de 2-OHE y 16 α -OHE antes y después.

Ozone therapy using in dermatological practice. Russian experience

Oksana Bitkina, I. Kosheleva, V. Baityakov

Department of skin and venereal diseases of Nizhny Novgorod State medical Academy, Nizhny Novgorod, Russia. First Moscow State Medical University named by I.M. Sechenov, Moscow, Russia. Mordovsky State medical University named by N.P. Ogarev

Now as result of practical using of ozone therapy in dermatovenereal clinics in Moscow, Nizhny Novgorod, Saransk, Vladimir, Murmansk and other larch cities during 20 years we have opportunity to formulate direction of successful experience in this branch of medicine. Ozone treatment using in atopic dermatitis, eczema, angiitis, herpes, piodermas, lichen planus, lichen sclerosis etatrophicus, alopecia areata, acne vulgaris, rosacea, aging skin.

One of more well investigated field is ozone treatment of allergic skin diseases such as atopic dermatitis and eczema (O. Ivanova, 1998; I. Kosheleva, 2003; S. Vedernikova, 2009). Since 1990 in Nizhny Novgorod research dermatovenereal institute ozone therapy of atopic dermatitis as minor autohemoozone therapy and rectal insufflations was controll with complex investigation of lipid peroxidation, antioxidative system, immunological tests, hystaminpexia and serotoninpexia indexes. As a result of therapy disappearance of clinical symptoms was in 38,8 %, clinical improvement – in 50,4 %, improvement – in 10 %. Negative prognostic tendency for atopic dermatitis has been determined in simultaneous decrement of enzyme activity of superoxidismutase, catalase of erythrocytes, CD4 and CD 8 levels with constant levels of immunoglobulins G_A and M. Catamnesis investigation of 139 patients suffered from AD demonstrated clinical efficacy in 90 %. In generalized variants advisable tactic is complex treatment including ozone therapy during 2-3 courses with intervals in 3-6 months.

Next step in development of ozone treatment in dermatology was investigation of chronic immune dependent dermatoses during ozone treatment (325 patients with localized scleroderma, 268 – with angiitis, 176 – with lichen planus, 208 – with psoriasis) by Dr. I. Kocheleva in dermatologic clinic of First Moscow State Medical University. Complex immunological and biochemical laboratory investigation concluded determination of cytokine profile, parameters of natural autoimmunity and estimation of gas blood content. As a basic method of ozone therapy was intravenous infusions of ozonized saline with concentration in solution 2mg/l 3 times a week on 400 ml, N 7-9 procedures.

Approach to ozone treatment of psoriasis was formulate in thesis of Dr. V. Baityakov, 2012. Complex treatment with ozonized saline was result in PASI index decrement on 75 % in 52,4 % of patients, summary level of lipid peroxidation reduction – on 36,5 %. Such methodic has anti-inflammatory, detoxication and immune correction effects.

Complex clinical and laboratory investigation of methodic of local ozone gas injection in face area for rosacea (80 patients) and acne vulgaris (56 patients) treatment was control with lipid peroxidation levels, antioxidative system data, oxidative protein modification, glycoamineglicans and oxyproline levels, thermovision estimation. This investigation allows develop ozone therapy using in cosmetology.

One of more actual aim in "ozonetherapeutic dermatology" now is creation of scientific foundation of local application of ozonids containing preparations with help of noninvasive methods of skin condition diagnostic, modern bacteriological tests and PSR.

The importance of ozone therapy in clinical veterinary practice. Case reports

Mercedes Hernández Avilés (SPA)

Veterinary Clinic DRAMP. Juan XXIII 69- Arganda del Rey- 28500 Madrid – Spain. E-mail: bertaviles@gmail.com

Introduction: In everyday veterinary practice, signs such as pain, pruritus, inflammation and ulcers among others are a constant finding. Given the therapeutic characteristics of ozone, it can be considered as an essential tool.

Objective: Use of ozone therapy in various pathologies having a high incidence in veterinary medicine.

Materials and methods: Three groups of dogs and cats are selected. First group: animals with conditions involving the locomotor system, presenting lameness signs, pain and decreased activity. Second group: animals with dermatological conditions, presenting pruritus, erythema, ulcer and/or necrosis signs. Third group: animals with kidney/liver failure, oncology patients and patients with ophthalmic conditions. Treatments were conducted with ozone, ozone-activated platelet-rich plasma (O₃PRP), ozonized oil and ozonized water. The first group received local ozone applications on painful spots at 8-10 µg/mL, 1-2 times a week, in a volume of from 1 to 10 mL on each spot. In cases of hip and knee arthroses, treatment consisted of three sessions of intraarticular O₃PRP injections, one every two weeks, as well as periarticular ozone injections at 8-10 µg/mL in a volume of from 5 to 20 ml into each joint. The second group received ozonized-water rinses, intralesional injections of 0.2-0.3 mL of ozone per spot, at 8-15 µg/mL, 1-2 times a week for 2-3 weeks, and ozonized oil applications at home. The third group received rectal ozone applications at 15-30 µg/mL for 2-3 weeks, major autohemotherapy (MAHT) at ozone concentrations of 15-30 µg/mL for 2-6 weeks, and weekly applications of minor autohemotherapy (mAHT) at 15-25 µg /mL for a total of 3 or 4. The choice for applying ozone in either way depended upon the concerned pathology, the animal's characteristics (whether it is quiet or nervous, its size...) and the owner's availability.

Results. First group. There was a decrease in pain since the first application and it vanished in 80% of the animals. Lameness disappeared in most of cases and diminished in the rest. The activity increased in 100% of the animals. Second group: There was a complete healing of wounds with tissue loss. Pruritus was reduced in up to 75 % in cases of allergy. Third group: There was a reduction in alanine aminotransferase, urea and creatinine altered values. The oncology patient stays without relapses. Healing of the ophthalmic disorder.

Conclusion: Because of its qualities, ozone therapy could be part of everyday veterinary practice. When administered by appropriate methods and in appropriate dosages, it is a most safe and efficient tool.

Importancia de la ozonoterapia en la clínica veterinaria. Casos clínicos

Mercedes Hernández Avilés (SPA)

Clínica Veterinaria DRAMP, España. Juan xxIII 69- Arganda del Rey- Madrid 28500 –España. E-mail: bertaviles@gmail.com

Introducción: En las consultas veterinarias cotidianas, signos como el dolor, el prurito, la inflamación, las úlceras entre otros, constituyen una constante. Dadas las características terapéuticas del ozono, podemos considerar a éste como una herramienta esencial.

Objetivo: Aplicación de ozonoterapia en diversas patologías de alta incidencia en medicina veterinaria.

Materiales y métodos: Se seleccionan 3 grupos de perros y gatos. Primer grupo: animales con afectación del aparato locomotor, con signos de cojera, dolor y disminución de la actividad. Segundo grupo: animales con afecciones dermatológicas, con signos de prurito, eritema, úlcera y/o necrosis. Tercer grupo: animales con insuficiencia renal/ hepática, paciente oncológico y paciente con patología oftálmica. Para los tratamientos, se utilizaron ozono, plasma rico en plaquetas activado con ozono (PRPO3), aceite ozonizado y agua ozonizada. El grupo 1 fue tratado con aplicaciones locales de ozono en los puntos de dolor, 8-10 µg/mL, 1-2 veces por semana, de 1 a 10 mL por punto. En artrosis de cadera y rodilla, inyecciones intraarticulares de PRPO3 en 3 sesiones, una cada 2 semanas. Añadiendo ozono periarticular, 8-10 µg/mL, de 5-20 ml en cada articulación. Segundo grupo: Lavado con agua ozonizada, inyecciones intralesionales de 0,2-0,3 mL por punto, 8-15 µg/mL de ozono. 1-2 veces por semana, 2-3 semanas, aplicación de aceite ozonizado en casa. Tercer grupo: Aplicaciones rectales a 15-30 µg/mL de ozono, durante 2-3 semanas, aplicación de auto hemo mayor (AHM) en concentraciones de 15-30 µg/mL de ozono, durante 2-6 semanas, auto hemo menor(AHm) a 15-25 µg /mL, una aplicación semanal hasta 3 o 4. La decisión de aplicar el ozono de una manera u otra dependió de la patología, de las características del animal (Tranquilo, nervioso, tamaño....) y de la disponibilidad del dueño.

Resultados. Primer grupo. El dolor disminuyó desde la primera aplicación y desapareció en un 80% de los animales. La cojera desapareció en la mayoría de los casos y disminuyó en el resto. La actividad aumentó en el 100%. Segundo grupo: Curación total de heridas con pérdida de tejido. Disminución de hasta el 75 % del prurito en los casos de alergia. Tercer grupo: Disminución de los valores alterados de alanina-amino transferasa, urea y creatinina. Mantenimiento del paciente oncológico sin recidivas. Curación del proceso oftálmico.

Conclusión: Gracias a las cualidades de la ozonoterapia, ésta podría formar parte de la práctica veterinaria cotidiana. Aplicada con métodos y dosis apropiadas es una herramienta muy segura y muy eficaz.

Application features of ozonotherapy in the practice of the otolaryngologist

Tetiana Barkhotkina

Medical center "Puls-tera", Kharkov National Polytechnic University Ukraine

Number of persons with ENT pathology is growing worldwide. Doctors of all specialties are often found with these diseases. Despite advances in modern medicine the problem of treatment of ear, nose and throat is very actual. Effectiveness of most drugs and treatments is not completely adequate. The aim of this work is to study the effectiveness of the use of ozone therapy in the treatment of diseases of the ear, nose and throat, taking into account the structural features of otolaryngology; definition of indications and contraindications ozonotherapy treatment of this pathology; and also the development of specific proprietary technologies of ozone therapy in the treatment of diseases specified location.

Materials and Methods. During the 19 years own studies and practical use of ozone therapy were examined and treated more than 4 thousand patients with ENT pathology. All patients received a comprehensive survey before and after ozonotherapy procedures: determination of the general condition of the organism recognized by the scale, ENT-endoscopy, cytological and bacteriological analysis of the mucosa, definition of the immune system state, prooxidation, energy metabolism, microcirculation and plasma membranes. Procedures were carried out systemic and local ozonotherapy.

As a **result** was developed various schemes of ozonotherapy in the treatment of diseases of the ear, nose and throat, which include conventional and specific techniques, and our own techniques of ozonotherapy in the treatment of diseases of the ear, nose and throat.

Los rasgos (características) de la aplicación ozonoterapia en la práctica del médico-otorrinolaringólogo.

Tetiana Barkhotkina

Centro médico " Puls-tera", Universidad politécnica nacional de Kharkov, Ucrania

Actualidad. La cantidad de las personas con la LOR-patología crece constantemente en el mundo moderno. Los médicos de especialidades diferentes se encuentran a menudo con estas enfermedades. A pesar de los logros de la medicina moderna el problema del tratamiento de las enfermedades de la oreja, la garganta y la nariz es muy actual. La eficiencia de la mayoría de los medios y los métodos del tratamiento se queda en un nivel insuficientemente.

El objetivo del este trabajo era el estudio de la eficiencia del uso ozonoterapia en el tratamiento de las enfermedades de la oreja, la garganta y la nariz tomando en cuenta el rasgo de la estructura de los LOR - órganos. También la elaboración de propias tecnologías específicas de ozonoterapia para tratamiento de las enfermedades de la localización indicada.

Materiales y métodos En la corriente de 19 años de propias investigaciones y el uso práctico de ozonoterapia es inquirido y curado más de 4 mil de pacientes con la LOR-patología. A todos los pacientes era pasada la inquisición compleja antes y después de los procedimientos de ozonoterapia: La definición del estado del organismo en general por la escala reconocida por todos, la endoscopia de los LOR-órganos, el análisis citológico y bacteriológico de mucoso, la definición del estado de los sistemas de la inmunidad, oxidación, del cambio energético, estado de la microcirculación y las membranas plasmáticas. Eran pasados los procedimientos de ozonoterapia sistémica y local. Como el **resultado** del trabajo son elaborados los esquemas distintos de ozonoterapia para el tratamiento de las enfermedades de la oreja, la garganta y la nariz, que incluyen las metodologías de uso general y específicas, también propias metodologías de ozonoterapia para el tratamiento de las enfermedades de la oreja, la garganta y la nariz. La definición de las indicaciones y las contraindicaciones de ozonoterapia en el tratamiento de la patología dada

In order to determine the effect of ozone therapy in the chronic heart failure, a study was carried out in a total of 30 patients with left chronic cardiac deficiency with ventricular systolic dysfunction degree II and III according to the definition of the Association of the Heart of New York. Patients attended the medical consulting room, a section of heart deficiency and part of the department of Transplant of the Heart and Service of cardiovascular surgery in Ameijeiras Brothers Hospital, in Havana city, Cuba, from January 2010 until December 2012. The sample was divided into two groups of 15 patients in each group: the study group treated with 32 applications of auto-hemotherapy with ozone, twice a week, besides the conventional pharmacological therapy and a control group where the conventional pharmacological treatment was only used. The evaluated parameters were: Life Quality for EUROQOL-5 D, the Functional Class of the NYHA, Oxygen Consumption for ergo metric tests and the Ejection Fraction calculated by echocardiography. Results were compared by Fisher's test with the statistical method *Fisher's Exact Test for Count Data* and by calculations of confidence intervals for proportions, being proven that the group treated with ozone had a significantly better answer than the control group in all the evaluated parameters and adverse events were not presented during the treatments. It is possible to think that the biggest auto-hemotherapy with ozone was useful and safe to help in the control of left chronic cardiac deficiency with ventricular systolic dysfunction degree II and III.

Con el objetivo de determinar el efecto de la ozonoterapia en la insuficiencia cardíaca crónica, se realizó un estudio en un total de 30 pacientes con insuficiencia cardíaca crónica izquierda con trastorno sistólico ventricular grado II y III según la definición de la Asociación del Corazón de Nueva York, que acudieron a la consulta de la sección de deficiencia cardíaca del departamento de Trasplante del Corazón y Servicio de cirugía cardiovascular en el Hospital Hermanos Ameijeiras, en Ciudad de la Habana, Cuba, en el periodo comprendido desde enero de 2010 hasta diciembre de 2012, la muestra se dividió en dos grupos de 15 pacientes cada uno, un grupo estudio que fue tratado con 32 aplicaciones de autohemoterapia mayor con ozono, dos veces a la semana, como coadyuvante de la terapia convencional y un grupo control en el que solo se usó el tratamiento convencional. Los parámetros evaluados fueron, Calidad de Vida por EUROQOL-5 D, la Clase Funcional del NYHA y Consumo de oxígeno por pruebas ergométrica, por último el Fragmento de Eyección calculado por ecocardiografía. Los resultados obtenidos fueron comparados mediante el test de Fisher con el método estadístico *Fisher's Exact Test for Count Data* y por cálculos de los intervalos de confianza para proporciones comprobándose que el grupo tratado con ozono tuvo una respuesta significativamente mejor que el grupo control en todos los parámetros evaluados y no se presentaron eventos adversos durante los tratamientos. Se puede concluir que la autohemoterapia mayor con ozono resultó útil y segura como coadyuvante en el control de la insuficiencia cardíaca crónica izquierda con trastorno sistólico ventricular grado II y III.

Alcoholic liver cirrhosis treated with AHTM

Eduardo Villanueva

Sociedad medica de ozonoterapia arvio3- Chile / edovillanueva1@gmail.com, www.ozono-terapia.cl, 56-2-27926505 santiago CHILE

Patient 65 years old, female, decompensated alcoholic liver cirrhosis disease, mild confusional state, characterized by ankle edema and significantly lower extremities, ascites that prevent normal breathing, yellowing of skin and mucous membranes, bleeding of gums and rectal, extreme tiredness, general weakness, feeling of nausea, lack of appetite, portal hypertension, splenomegaly, the patient also has a giant umbilical hernia, surgery not possible, ... treated for 3 years with AHTM on weekly basis.

Introduction: The objective of the present work is to demonstrate the efficiency of therapy applied weekly, in a patient with alcoholic liver cirrhosis for 3 years.

Methods: AHTM, weekly was used. Team Hyper Medozon comfort ozone (HAB HERRMANN). In sterile bottle (PPS), downs sangodrop, using citrate fixed dose, and dose of ozone concentration 20 µg / ml average. Periodic examinations controls blood count, biochemical profile, coagulation, prothrombin, complete urine, liver profile, ascitic fluid analysis, ultrasonography exam taken

Result / Discussion: During these 3 years, the patient remained stable, improving their clinical control parameters, decreasing ascites and improving laboratory parameters.

Cirrosis hepatica alcoholica tratada con AHTM

Eduardo Villanueva

Sociedad medica de ozonoterapia arvio3- Chile / edovillanueva1@gmail.com, www.ozono-terapia.cl, 56-2-27926505 santiago CHILE

Paciente de 65 años, sexo femenino, que presenta cuadro descompensado de cirrosis hepatica alcoholica, en estado confusional leve, caracterizado por edema maleolar y de extremidades inferiores importante, con ascitis que le impiden la respiracion normal, ictericia de piel y mucosas, sangramiento de encias y rectal, cansancio extremo, debilidad general, sensacion nauseosa, falta de apetito, hipertension portal, esplenomegalia, sumado a lo anterior la paciente es portadora de una hernia umbilical gigante no operable, tratado por 3 años en forma semanal con AHTM.

Introducción: El objetivo del presente trabajo fue demostrar la eficacia de la terapia aplicada de forma semanal, en paciente con cirrosis hepatica alcoholica durante 3 años.

Materiales y métodos: Equipo de ozonoterapia Hyper Medozon comfort (HAB HERRMANN). En frasco esteriles, al vacio, (PPS), bajadas sangodrop y anticoagulante citrato a dosis fijas de 5 ml, y con dosis de concentracion de ozono de 20 ug/ml promedio. Se toman exámenes de controles periodicos de hemograma , perfil bioquimico, coagulacion, protrombina, orina completa, perfil hepatico, analisis de liquido ascitico, ecotomografia.

Resultados y Discusión: Durante estos 3 años la paciente ha permanecido estable, mejorando sus parametros clinicos de control, disminuyendo su ascitis y mejorando sus parametros de laboratorio.

Ozonotherapy for the treatment of endometritis

Gennady O. Grechkanov, T.M. Motovilova, Irina V.Ponomareva

Department of Obstetrics and Gynecology, Medical Academy of Nizhny Novgorod, Minina square,10/1, 603005, Nizhny Novgorod, Russia

The inflammatory diseases of female genital organs are numbered among the most frequent pathologies of fertile women. In order to increase the efficiency of treatment and to avoid possible side effects we have used intrauterine irrigations with ozonized distilled water in case of acute endometritis. This method of treatment has been provided to 60 patients with postnatal and postabortive endometritis. Based on the received results, we have drawn a conclusion that in the course of treatment all patients showed an improvement in general state, body temperature returned to normal, symptoms of intoxication decreased, sleep and appetite got better, pain syndrom disappeared faster, pathological discharges were eliminated. The results of laboratory investigations have demonstrated a credible decrease in ESR, normalization of leukocyte number, a decrease in circulating immune complexes.

Thus, for treatment of endometritis we may recommend the given method of ozonotherapy to be used in combination with a basic anti-inflammatory therapy.

Ozonoterapia en Pacientes con Fibrosis Pulmonar.

José Luis Calunga Fernández, Yusleidis Paz, Vladimir Hernández Ruiz.

La IFP es una forma de neumonía intersticial crónica limitada al pulmón, caracterizada por disnea progresiva, tos crónica, alteración funcional restrictiva y el patrón histológico de la neumonía intersticial usual (NIU) en la biopsia pulmonar. La etiología es desconocida. Ocurre más frecuentemente en hombres, usualmente de edad media (40-70 años). Aunque existen terapias actuales para el manejo terapéutico de estos pacientes, sigue siendo alta la morbimortalidad en la fibrosis pulmonar, por lo que se hace necesario la búsqueda de nuevas herramientas terapéuticas alternativas que mejoren la calidad de vida de estos pacientes.

Atendiendo a los efectos beneficiosos de la Ozonoterapia frente al metabolismo del Oxígeno y su efecto estimulador de las defensas antioxidantes enzimática, fue objetivo de nuestro trabajo valorar el efecto de la Ozonoterapia vía Sistémica sobre pruebas de función respiratoria en pacientes portadores de Fibrosis Pulmonar.

Material y Método: Se tomó una muestra de 25 pacientes portadores de Fibrosis Pulmonar diagnosticada a los cuales se le midieron en tres observaciones como pruebas de función respiratoria el volumen espiratorio forzado al primer segundo, la capacidad vital forzada, el índice de Tiffenau y el índice de Bode. El estudio demoró 6 meses y estos pacientes fueron observados al inicio, al mes y al terminar el sexto mes del estudio. Los pacientes que incluyeron el universo de estudio, llevaron un ciclo de Ozonoterapia vía rectal en un promedio de 20 sesiones, empleándose concentraciones entre 30 y 35 miligramos por litros y volúmenes entre 100 y 150 mililitros, combinándose con la vía de la autohemoterapia mayor con concentraciones de 40 y 45 miligramos por litros con un volumen de 100 mililitros a ozonizar 150 mililitros de sangre del paciente.

Resultado. La Ozonoterapia por ambas vías sistémicas combinadas, mostró un efecto beneficioso en el incremento significativo de volúmenes respiratorios, decremento del grado de disnea e incremento en la distancia recorrida por los pacientes en 6 minutos.

Conclusión. La Ozonoterapia mejora función respiratoria y calidad de vida de pacientes portadores de Fibrosis Pulmonar, no se observaron efectos adversos durante el estudio.

Effects of ozone and singlet oxygen inhalations to oxidative metabolism in rats

Martusevich A.A., Peretyagin S.P., Martusevich A.K.

Nizhny Novgorod Research Institute of Traumatology and Orthopaedics, Nizhny Novgorod, Russia.

Introduction. In last decade investigation of pro- and antioxidant balance is one of the most tested parameters of organism homeostasis. Disorders of this balance caused specific state are integrated in term «oxidative stress», including activation of free radical processes without antioxidant compensation. In same time methods of correction of this pathological state is not so wide and include ozonotherapy and antioxidants use. That is why «new» reactive oxygen species, such as singlet oxygen (SO), are interesting as alternative physical agents for normalization of oxidative metabolism. At other side, biological effects of SO are not investigated fully, and proven data include the results of its clinical use, but molecular and cellular mechanisms of its action are particularly unknown. The *aim of this work* was the analysis of singlet oxygen and ozone effect on lipid peroxidation and antioxidant activity of rat organs and blood.

Material and methods. Wistar rats were randomly divided into five groups: control group (without any manipulations; n=10) and four main groups (n=10 in each group) with inhalations by dry, moisture and oil-processed ozone-oxygen mixture (ozone concentration 60 µg/l) or singlet oxygen, respectively. Rats got 1 inhalation per day during 10 days. Generation of singlet oxygen was executed with «Airnergy» device (power of apparatus – 100%). Ozone was produced with «Medozons BM» ozonator. Activity of pro- and antioxidant systems was estimated in blood and tissues (lungs, heart, liver and kidney) by induced biochemiluminescence. Organs homogenates were prepared with homogenizator «UltraTurrax». Statistical data analysis was done using the Microsoft Excel 2007 spreadsheets as well as using the program Primer of Biostatistics 4.03.

Results and discussion. Singlet oxygen was shown to exert the «mildest» effect with stimulation of blood antioxidant potential and saving tissue oxidative potential without hyperactivation of lipid peroxidation. Use of moistened ozone-oxygen mixture caused moderate stimulating action on antioxidant reserves of blood and tissues. Dry ozone-oxygen mixture is consisting oil ozonides clearly decreased lipid peroxidation intensity with temperate decreasing of antioxidant potential of rats blood and tissues.

Conclusion. We stated that investigated reactive oxygen species caused differential action of state of pro- and antioxidant systems of rats organisms. So, the SO inhalations provide most optimal changes of estimated balance, supplied antioxidant reserves of blood previously. Most negative effects were observed at inhalation of dry ozone-oxygen mixture. They included inhibition of lipid peroxidation and antioxidant reserves in blood plasma with clear activation of free radical oxidation processes in rats' tissues.

UVB - Ultraviolet Blood Irradiation: An analysis of three major changes

Tom Lowe

Bachelor of Science - University of Wisconsin. Director of Physicians UBI awareness. CEO of Ultraviolet Pure - 11968 Sweetwater Dr, Grand Ledge, MI USA.
Tom@DrsUBI.com

The field of Ultraviolet Blood Irradiation has needed updating both of the devices and also of the procedure. New studies show that 500 joules of energy are needed to inactivate tough viral strains. This presentation will discuss the necessary changes and their ramification on the combined medical therapy of ozone and UVB.

There has been a plethora of research studies on UV light over the past 20 years. Most of it is unknown by clinicians. Significant is the determination of the intensity of UV Light, the effectiveness of each band of wavelength of UV light and also the positive ramifications of some of the blue light spectrum and its affects on blood.

Dynamics of the new effective therapy include: 1) amounts of blood used - now only 40cc is needed, 2) dilution of the blood into saline for a more effective therapy, 3) movement of blood within the cuvette and its ability to be exposed to the light, 4) Adequate exposure to the light by the light source, 5) Blue light 410nm and potential healing effects on the blood. **The three areas** that are covered in this discussion are:

1) Development of a device that allows a greater amount of energy to be introduced into the blood through the use of longer UV lights, more UV lights and reflectorized surfaces. This allow for the exposure time to be less which eliminates overheating of the blood product and a shorter time in the IV chair for patients. It also allows for more IV therapy activities by the staff. Also the potential to add a (blue light) spectrum.

2) Development of a saline dilution protocol. Blood is optically dense. Because of this only 5% or less of the whole blood is affected by the light therapy. By diluting the blood with normal saline the amount of blood taken from the patient is less and the exposure to the light is greater. Also reinfusion is much easier.

3) The cuvettes of the past had small surface areas, were too short and did not adequately turbulate the blood allowing for a more even infusion of light energy When trying to get more energy into the blood the drip speed was often too slow. This allowed for an inadequate therapy and also the potential for overheating of the blood.

Conclusion: Medical Ozone in the form of MAHT is commonly used along with the UBI process. They are widely considered synergistic therapies that multiply the healing effects when used together. Implementation of the UVB/Ozone therapy is simple and requires only minor protocol changes. Although either can be used as a solo therapy they are best used together.

These three improvements represent the next generation of UBI/ozone treatments. They allow for better and more effective therapy. At the present time there are over 170 physicians using these improved therapy techniques and devices. Some 30,000 + treatments have been accomplished within the past 12 months with positive results.

Oxidative Stress Blood Level Analysis in Ozone Therapy

Ruhi Cakir

Mediozon Clinics, Istanbul TURKEY

In Ozone Therapy, ozone dose seems to follow an "U shaped" curve being stimulatory at low dosages and inhibitory at high dosages. Despite this concept sounds very simple, the clinical practice needs some important detail in relation to the patients, since the definition "low dosage and high dosage" should be tailored considering the binomium subject / disease, particularly in terms of oxidative stress (OS).

Although when ozone therapy is performed within the therapeutic range, O₃ causes a temporary OS condition. This aspect is important, since some of the activity of this therapy belongs to the calibrated OS, that seems to "reset" the equilibrium between oxidant and antioxidant capacity, ending up with favorable clinical results. This effect has been defined as "oxidative preconditioning".

In case of patients already under OS with a low antioxidant reserve (AO), even a mild adjunctive oxidation together with a mild adjunctive shortage of the antioxidants, can create the condition of an unfavorable oxidative balance (OB). This will be the cause of at least two events: a) the patient may suffer of side effects (very rare) b) the therapy may be less effective.

To avoid these two disadvantages to measure the OB before the therapy, than behave accordingly in terms of O₃ dosage, and follow with the balance monitoring.

³ National Rehabilitation Center, Hospital "Julio Díaz", Fontanar, Havana. Cuba.

⁴ Latin American School of Medical Sciences; Santa Fe, Playa. Havana. Cuba

The generalized osteoarthritis is due to a degenerative and inflammatory process. It is the more frequent rheumatologic illness at world level and it constitutes an important cause of inability in the heavy body-weight adults. Moreover its treatment is very expensive in relation to its high social and economic impact. In the literature the beneficial effects of the ozonotherapy have been reported for this affection using protocols of increasing dosage in relation to the body weight. The objective of this work was to evaluate if there is any difference by using a dose in relation to the body weight in comparison of using a fixed dosage. Regarding the pain, all of these patients, had been evaluated by the same visual scale, before, later and after three months of the treatment. 160 patients were included with the same diagnosis: they were on average 64.1 year-old and had a body-weight average of 81.7 kg (43.2 minimum, 120 maximum). The sample was divided in two similar groups of 80 individuals: Group 1 was the control, group 1: 20 ozonotherapy sessions were performed for rectal insufflation in escalating absolute dose. On the other hand Group 2, received also 20 ozonotherapy sessions for rectal route with a dose related to the body weight, in an upward way. At the end of treatments by using the test OR of Mann-Whitney for the two independent samples to the variable: pain after the treatment: a significant difference became evident in favour of the Group 2 where the ozone dose had been related to the body weight. However this was true only in the patients with weight higher than the average of the studied group. It can be concluded that the ozone dose used for the treatment of the pain in patient with generalized osteoarthritis must be related the body-weight in order to obtain a reliable results.

³ Centro Nacional de Rehabilitación, Hospital "Julio Díaz", Fontanar, Cuba.

⁴ Escuela Latinoamericana de Medicina; Santa Fe, Playa. Cuba

La osteoartritis generalizada consiste *en* un proceso degenerativo e inflamatorio, es la enfermedad reumatológica más frecuente a nivel mundial, constituye una causa importante de discapacidad en los adultos mayores y su tratamiento genera altos costos debido a su alto impacto social y económico. En la literatura se reportan evidencias de los efectos beneficiosos de la ozonoterapia para esta afección utilizando protocolos de dosis absolutas de forma escalonada. El objetivo de este trabajo fue evaluar si existe diferencia utilizando dosis relativas al peso corporal al compararla con las dosis absolutas, en cuanto a la respuesta al dolor en estos pacientes, evaluada por la escala visual análoga, antes, después y a los tres meses del tratamiento. Se incluyeron 160 pacientes con este diagnóstico con un promedio de edad de 64.1 años y un peso promedio de 81.7 kg (43.2 mínimo, 120 máximo). La muestra se dividió en dos grupos de 80 individuos cada uno: Grupo 1, control, donde se aplicaron 20 sesiones de ozonoterapia por vía rectal en dosis absolutas escalonadas; Grupo 2, donde se aplicaron 20 sesiones de ozonoterapia por vía rectal a dosis relativa al peso corporal, de forma escalonada. Al realizar la prueba U de Mann-Whitney para dos muestras independientes a la variable: dolor después del tratamiento, comparando los grupos: tratamiento similar para todos y tratamiento de acuerdo al peso corporal, se obtuvo que existe diferencia significativa a favor del Grupo 2 con dosis relativa al peso, pero solo en los pacientes con pesos por encima de la media del grupo estudiado. Se puede concluir que para dosificar el ozono médico para el tratamiento del dolor en pacientes con osteoartritis generalizada se debe considerar el peso corporal para obtener una óptima respuesta en todos los pacientes.

Seminarios / Conferencias	During the last 10 years I have presented at seminars, conferences and Congresses in Cuba, Brazil, and the USA. Served as Chairman of Odontology Section of last Cuba International Symposium		
Libros / Artículos Publicados	Co-author with Dr Judit Martinez from Cuba on Ozone Safety in the Dental Clinic, Effects of ozone on treating Periodontal Disease, published Cuban national Journal Jan 2014, Co-author of upcoming Ozone Applications with Dr Silvia Menendez from Cuba.		
Asociaciones Profesionales / Consejos editoriales / Tribunales	Founding member IAOHD. Member of AAO Educator with Pathfinders Institute in USA Chairman of Dental Ozone Therapies Group, education group from USA		
Entrenamientos, docencia y cursos impartidos	At Congresses Cuba International Ozone Symposium, Brazil Ozone Society Conference, AAO and IAOHD meetings (chair), Certified Ozone User from AAO Group, Speaker at AAO and IAOHD meetings, as well as organized ozone education courses offered thru Dental Ozone Therapies Group and Pathfinders Institute in California		

Julian Charles Holmes

Address: 5 Little Kimble. Cnr Avenue & Marie Street. Newlands 7700.
Cape Town. South Africa
Mobile (SA) 0847 224469
Email: <drjulianholmes@gmail.com>

Dr Julian Holmes qualified from Sheffield University in Geography and Archaeology in 1978, and returned to Sheffield Dental & Medical School to read Dentistry in 1980.

After qualifying in 1985 he left to work in Spain and Gibraltar, returning to the UK in 1995 to set up his own Private Dental Care Practice in Berkshire. This was sold in 2004 to concentrate full time on research and lecturing. He has since authored or co-authored over 60 published papers, presented clinical papers & research, trained dentists & doctors, and lectured in most countries around the world at over 200 clinical meetings.

He now lives in South Africa, after coming here to lecture over 20 years ago. He and his wife have a home in Newlands, Cape Town.

Dr Holmes acts as Clinical Director to Asanti-Pihani Pty and Grey Cell Enterprises CC. He is the current President of the International Association for Ozone in Healthcare & Dentistry and Scientific Officer to the Ozone Association of South Africa. Previous to that, Dr Holmes worked part-time as a dentist in the UK and Ireland, with teaching and training responsibilities for new dentists. He is a Member of the South African Association of Integrative Medicine, and the South African Natural Healers Association.

He has designed dental equipment for GCE, Ozi-Cure and Lime Technologies, as well as acting as Clinical Advisor and Clinical Director of these companies. Dr Holmes researched and wrote the Clinical Protocols for the HealOzone (KaVo), as well as the CE Certification & Clinical Protocols for the Ozi-Cure (O3, South Africa), the CMU3 (Lime Technologies, Ireland, SA, UK) and the CMU4 (Grey Cell Enterprises CC SA).

He holds two patents in South Africa; the patent filing reference numbers are: 2005/4328 entitled DRESSINGS; and 2005/3776 entitled GAS-LIQUID CONTACTOR in South Africa. He has registered a number of Trade Names and Marks, and is involved in providing access to low cost health care using natural local products in the South African disadvantaged communities.

He has a number of studies currently running, looking at the effects of ozonated liquids in dental disease control, HIV and skin conditions. In 2006 a pilot study in Africa showed effective treatment for HIV with ozonated plant oils, and this has been expanded to a 40-subject HIV study in Cape Flats, Cape Town. This study started February 2014, and will report in April 2014. A 200-Subject HIV study is being formulated with interested parties in KZN that is estimated to start in June 2014, reporting in September 2014.

Velio Bocci(ITA)

Department of Physiology, University of Siena, via A. Moro 2, 53100 Siena, Italy. Phone: +39 (0)577 234226; Fax: +39 (0) 577 234219. Email: bocci@unisi.it

The Ministry of Education has nominated (May 2003) him Emeritus Professor at the Department of Physiology, University of Siena. Member of ISCO3

He was born in Siena, Italy, on December 21st of 1928. In 1947, although he had been awarded a disliked accountant degree, he was able to enrol as a medical student at the University of Siena in 1948 and he was the first of his course to be awarded the Medical Doctor degree in July 1954 with 110/110 cum laude.

He has personally contributed to develop three clinical trials, of which two at the Siena University Polyclinic: the first regarding age-related macular degeneration (dry form) (1996-2001) and the second regarding chronic limb ischemia (2002-2005). Both studies, reported in international journals, have well clarified the great advantage of ozonotherapy in comparison to orthodox treatments. A third study (1998-2000) was performed at the hospital at San Patrignano (Rimini) to evaluate the effect of ozonated autohemotherapy in HIV infection. An improvement of the quality of life was noted but the infection was not modified. Moreover, he has gratuitously practiced ozonotherapy in a charity clinic (Misericordia at Taverne D'Arbia, Siena) from 2005 up to March 2008: While excellent results were achieved in various ischemic diseases, with the exception of a transitory feeling of well-being, preterminal cancer patients with liver and lungs metastasis, previously heavily treated with chemotherapy, did not show any improvement.

He is the author of about 480 publications and monographs, mostly published in international, peer-reviewed journals including a book on Interferons (1993) and three books on oxygen-ozone therapy (2000, 2002, 2005). The last two are in English: Oxygen ozone therapy. A critical evaluation, pag 1-440, 2002, Kluwer Academic Publishers Dordrecht, The Netherlands and the second: Ozone. A new medical drug. pag. 1-295, 2005, Springer, Dordrecht, The Netherlands. The second edition of the latter book has been just printed. So far, these books have been translated into Chinese, Japanese and Greek. In 1995, he was awarded the Hans Wolff prize for innovative researches in the field of ozonotherapy. By considering him the top expert of ozonotherapy, the International Ozone Association (Zurich) invited him to hold the lecture on "Ozone in Biology and Medicine" at the International Ozone Symposium (Basel, October 21-22 1999) during the 200th Anniversary of the birth of the ozone discoverer C.F. Schönbein. He was awarded the "Stramezzi" prize for his books on ozonotherapy by the Academy of History of Medical Art in Rome (October 2003). The reader may be interested in five recent reviews, which briefly give a fair idea of the basic biology and usefulness of ozonotherapy in Medicine: **(1)**Scientific and medical aspects of ozone therapy: State of the art. Archives of Medical Research, 37 (2006) 425-435; **(2)**Is it true that ozone is always toxic? The end of the dogma. Toxicology and Applied Pharmacology, 216 (2006) 493-504 **(3)**The case for oxygen-ozonotherapy. British J. of Biomedical Science, 64 (2007) 44-49 **(4)** Basic Biological and Therapeutic effects of Ozonotherapy in Human Medicine, Review published by UNESCO-EOOLS Encyclopedia, 2008 and **(5)** The ozone paradox: ozone is a strong oxidant as well as a medical drug, Medicinal Research Reviews.29, (2009) 646-682. They are available on request. All the other papers can be traced in PubMed. He owns also three US patents.

Seminarios / Conferencias

150 ponencias en 30 eventos. Conferencias en 30 Instituciones de Salud en Cuba, la Universidad Autónoma de Ciudad México, el Instituto de Química-Física de la Academia de Ciencias de la URSS, el Hospital Santa Corona (Garbagnate-Milanese), de Milán, la Universidad Técnica de Parma, la Universidad de Málaga y las III Jornadas Triveneto de la Asociación Italiana de Investigación y Actualización Científica, en Padua, etc.

Libros / Artículos Publicados

60 artículos, 40 resúmenes, 7 en revistas internacionales.

Asociaciones Profesionales / Consejos editoriales /

Sociedad Española de químicos Cosméticos, AEPROMO, SEOT.
 Revista CENIC Ciencias Químicas, Revista CENIC Ciencias Biológicas

Entrenamientos, docencia y cursos impartidos

3 tutorías (PhD y Especialista de 2º Grado), 15 cursos impartidos.

Premios Científicos

2 Distinciones Científicas de la Academia de Ciencias de Cuba, 2 Distinciones Científicas otorgadas por el Ministerio de Educación Superior de Cuba, varios Premios al Mérito Científico Técnico, otorgados por diferentes Instituciones en Cuba, uno de ellos, en 1992, por un trabajo de generalización titulado: "Desarrollo de las aplicaciones del ozono en Cuba".

Otros aspectos a destacar

Ha sido: Director de la División de Química del CNIC de Cuba.
 Director Fundador del Centro de Investigaciones del Ozono de Cuba.
 Director del Programa Nacional de Introducción de la Ozonoterapia en Cuba.
 Miembro de la Comisión de Control Estatal de Medicamentos de Cuba, que revisó y completó las investigaciones preclínicas acerca de la ozonoterapia, para su aprobación en Cuba.
